SV969500E

3x400VAC 7,5KW

two legs model
Boitier IP20
IP20 housing

Le relais SV969500E est étudié pour démarrer et inverser le sens de rotation de moteurs triphasés asynchrones, avec la commutation de 2 phases uniquement (4 commutateurs : 2 legs) . Le calibre des thyristors est de 75ARMS , ce qui permet de contrôler un moteur avec un courant nominal de 16ARMS soit 7,5kWatts sous 400VAC , en tenant compte des courants de démarrage et d'inversion. Ces produits sont réalisés avec des composants haute immunité , sans relais REED (tout électronique) , avec toutes les protections : RC , VDR,... mais aussi intervérrouillage , temporisation entre chaque inversion,... Ces relais sont équipés de thyristors 1600V avec une protection adaptée pour des réseaux jusqu'à 550VRMS.

The relay SV969500E is designed for controlling and inverting the direction of a three-phase motors without direct third leg (two legs). The maximum current of semiconductors is 75 Amps. RMS , which allows a motor with a current rating of 16 Amps.rms or approximately 7,5 kW under 400 V , taking the starting and reversing current into account.

These products are designed with very high immunity components , without REED switches (only composed of solid state components) , with all protections : RC , VDR ,..... temporisation ,....., and 1600Volt peak voltage components with on this model a voltage protection up to 550VRMS mains.

Surge current : $I_{tsm} (A_{peak}) = f(t)$ for 75A models with $I_{tsm} = 1000A$

1 - I_{tsm} non répétitif sans tension réappliquée est donné pour la détermination des protections.
No repetitive I_{tsm} is given without voltage reapplied for the determination of the protection.

2 - I_{tsm} répétitif est donné pour des surcharges de courant (T_j initiale = 70°C). La répétition de ces surcharges de courant diminue la durée de vie du Relais.
Repetitive I_{tsm} is given for inrush current with initial $T_j = 70^\circ C$. The repetition of the sur-

Précautions :

* Les relais à semiconducteurs ne procurent pas d'isolation galvanique entre le réseau et la charge.

Cautions :

* Semiconductor relays don't provide any galvanic insulation between the load and the mains.

Other application with
one phase motor

Note : Le relais SV969300 développé initialement pour inverser le sens de rotation des moteurs asynchrones triphasés peut aussi être utilisé pour l'inversion de moteurs monophasés.

Ce relais possède 4 voies de puissance, une temporisation à l'inversion et un verrouillage en cas de commande simultanée. Pour des quantités importantes, en utilisation monophasée, le produit peut être simplifié car seulement 2 voies sur 4 sont utilisées.

Note : The SV969300 relay which has been initially developed in order to reverse three phase asynchronous motors, can be used for reversing single phase motors.

This relay has 4 power switches, a reversing temporization and a lock in case of simultaneous controls. If you need a big quantity for a single phase use, please contact us, because we are able to simplify the product as only 2 switches among 4 are used.
