

NTE3036 Phototransistor Silicon NPN Photo Darlington Light Detector

Description:

The NTE3036 is a silicon NPN photo Darlington light detector in a TO18 type package designed for use in applications such as industrial inspection, processing and control, counter, sorters, switching and logic circuit or any design requiring very high radiation sensitivity at low light levels.

Features:

- Popular TO18 Type Hermetic Package for Easy Handling and Mounting
- Sensitive Throughout Visible and Near Infrared Spectral Range for Wider Application
- Minimum Light Current: 12mA @ H = 0.5mW/cm²
- External Base for Added Control

Absolute Maximum Ratings: (T_A = +25°C unless otherwise specified)

Collector–Base Voltage, V _{CBO}	50V
Collector–Emitter Voltage, V _{CEO}	40V
Emitter–Base Voltage, V _{EBO}	10V
Light Current, I _L	250mA
Total Device Dissipation (T _A = +25°C), P _D	250mW
Derate Above 25°C	1.43mW/°C
Operating Junction Temperature Range, T _J	–65° to +200°C
Storage Temperature Range, T _{stg}	–65° to +200°C

Electrical Characteristics: (T_A = +25°C unless otherwise specified)

Parameter	Symbol	Test Conditions	Min	Typ	Max	Unit
Static Characteristics						
Collector Dark Current	I _{CEO}	V _{CE} = 10V, H ~ 0	–	10	100	nA
Collector–Base Breakdown Voltage	V _{(BR)CBO}	I _C = 100μA	50	100	–	V
Collector–Emitter Breakdown Voltage	V _{(BR)CEO}	I _C = 100μA	40	80	–	V
Emitter–Base Breakdown Voltage	V _{(BR)EBO}	I _E = 100μA	10	15.5	–	V

Electrical Characteristics (Cont'd): ($T_A = +25^{\circ}\text{C}$ unless otherwise specified)

Parameter	Symbol	Test Conditions	Min	Typ	Max	Unit
Optical Characteristics						
Light Current	I_L	$V_{CC} = 5\text{V}$, $R_L = 10\Omega$, Note 1	12	20	—	mA
Collector–Emitter Saturation Voltage	$V_{CE(\text{sat})}$	$I_L = 10\text{mA}$, $H = 2\text{mW}/\text{cm}^2$ at 2870°K	—	0.6	1.0	V
Photo Current Rise Time	t_r	$R_L = 10\Omega$, $I_L = 1\text{mA}$ Peak, Note 2	—	15	100	μs
Photo Current Fall Time	t_f	$R_L = 10\Omega$, $I_L = 1\text{mA}$ Peak, Note 2	—	65	150	μs

Note 1. Radiation flux density (H) is equal to $0.5\text{mW}/\text{cm}^2$ emitted from a tungsten source at a color temperature of 2780°K .

Note 2. For unsaturated response time measurement, radiation is provided by pulse GaAs (gallium–arsenide) light emitting diode ($\lambda\ 0.9\mu\text{m}$) with a pulse width equal to or greater than $500\mu\text{s}$, $I_L = 1\text{mA}$ peak.
