MultifunctionalHeat and cold meters
Ultrasonic, with integrated
communication interface

READ THROUGH CAREFULLY BEFORE USE.
KEEP ACCESSIBLE THROUGHOUT THE PRODUCT LIFE TIME.

EN

Installation of heat meters with cooling option and pure cold meters

Complete and check installation

Seal the temperature sensor and flow sensor to protect against tampering.
The seals shown in this user manual are examples.
They may differ from the seals enclosed.

Display level L9 – Maximum values

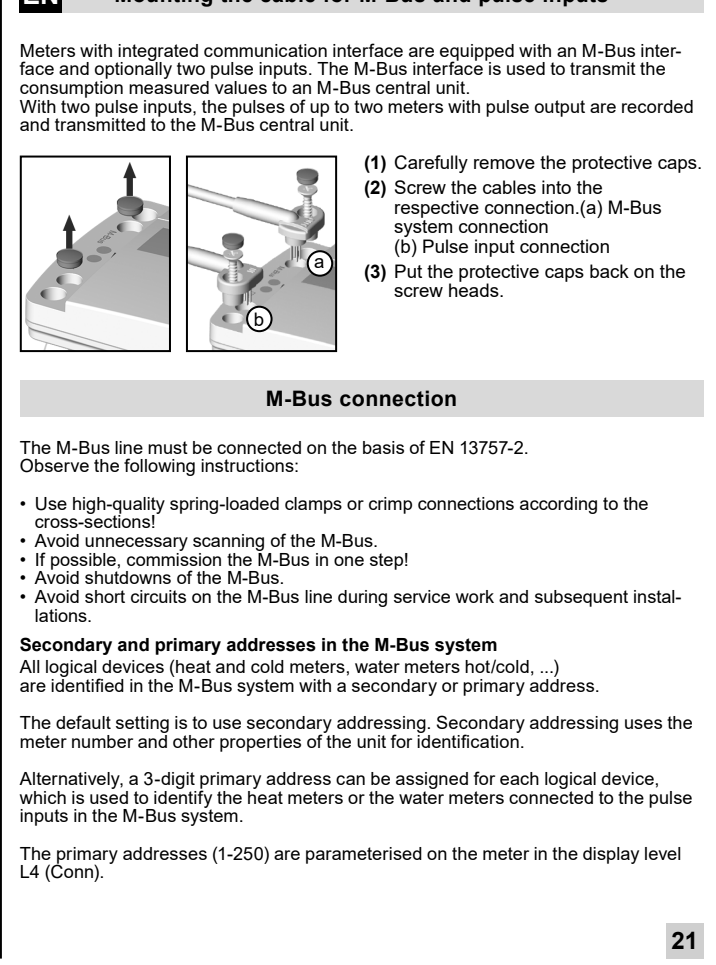

EN	Scope of delivery
1	1 x meter
2	1 x temperature sensor kit
3	1 x flow sensor kit
4	1 x connection cable kit
5	1 x connection cable (depending on device variant)
6	1 x user manual
7	Keep objects away
8	Do not use any objects to press the two openings in the flow sensor.

Mounting the cable for M-Bus and pulse inputs

Parameter setting – key assignment

EN	Safety of lithium batteries
1	Safety notes for lithium batteries
2	The calculator unit of the meter is equipped with a lithium battery. Lithium batteries are safe provided they are handled properly under the parameters specified by the manufacturer.
3	Proper handling
4	Observe the specified ambient conditions when transporting, storing and using the device.
5	Avoid mechanical impacts such as dropping or crushing.
6	Mechanical damage such as opening, drilling through or dismantling the batteries is prohibited.
7	Avoid a short-circuit caused by e.g. foreign matter or water.
8	Avoid thermal overload e.g. from constant exposure to sunlight or fire.
9	Transport
10	Special requirements on packaging and marking must be heeded during shipping by air carriers (air, rail, sea, inland waterway). The national and international hazardous goods regulations respectively valid must be followed.
11	Lithium batteries are always subject to the requirements of hazardous goods laws.
12	Batteries meet the basic requirements on transport.
13	Danger caused by improper handling
14	Incorrect treatment or dismantling which lead to improper operation can lead to leaks and battery content materials and decomposition products escaping. In this case, major reactions can take place which present a risk to both health and the environment. (Danger of chemical and fire).
15	Technical defects or improper handling can lead to an uncontrolled and accelerated release of the chemically stored energy. This is usually released in the form of thermal energy, which can lead to a fire.
16	Emergency instructions
17	In the event of the contact materials of the lithium batteries coming into contact with the air or skin, rinse thoroughly with water for at least 15 minutes. A doctor must always be contacted if gases or smoke are inhaled.
18	A doctor must always be contacted if gases or smoke are inhaled.
19	Burns must be treated accordingly and a doctor must be contacted.
20	If there is intensive smoke development or gas release, leave the room immediately. Ensure there is sufficient ventilation without putting yourself in danger if possible, in other words without inhaling the gas or smoke.
21	If swallowed, drink plenty of water and raise your mouth out.
22	Seek medical advice immediately.
23	Notes and warranty
24	This product must be installed properly and in accordance with the specified assembly guidelines and may therefore only be installed by qualified, trained and skilled personnel.
25	The meters are used for the central recording of thermal energy consumption.
26	Intended use
27	The meters are used for the central recording of thermal energy consumption.
28	Non-intended use
29	Any other use other than the above described or any modification of the device is considered to be non-intended use.
30	Warranty and guarantee
31	Warranty and guarantee claims are only valid if the product in question has been used in accordance with their intended use and if technical requirements and any applicable technical regulations have been observed.
32	Safety notes
33	Improper handling and excessively forceful tightening of threaded fittings can cause leaks. Observe the maximum torque stated in the manual.

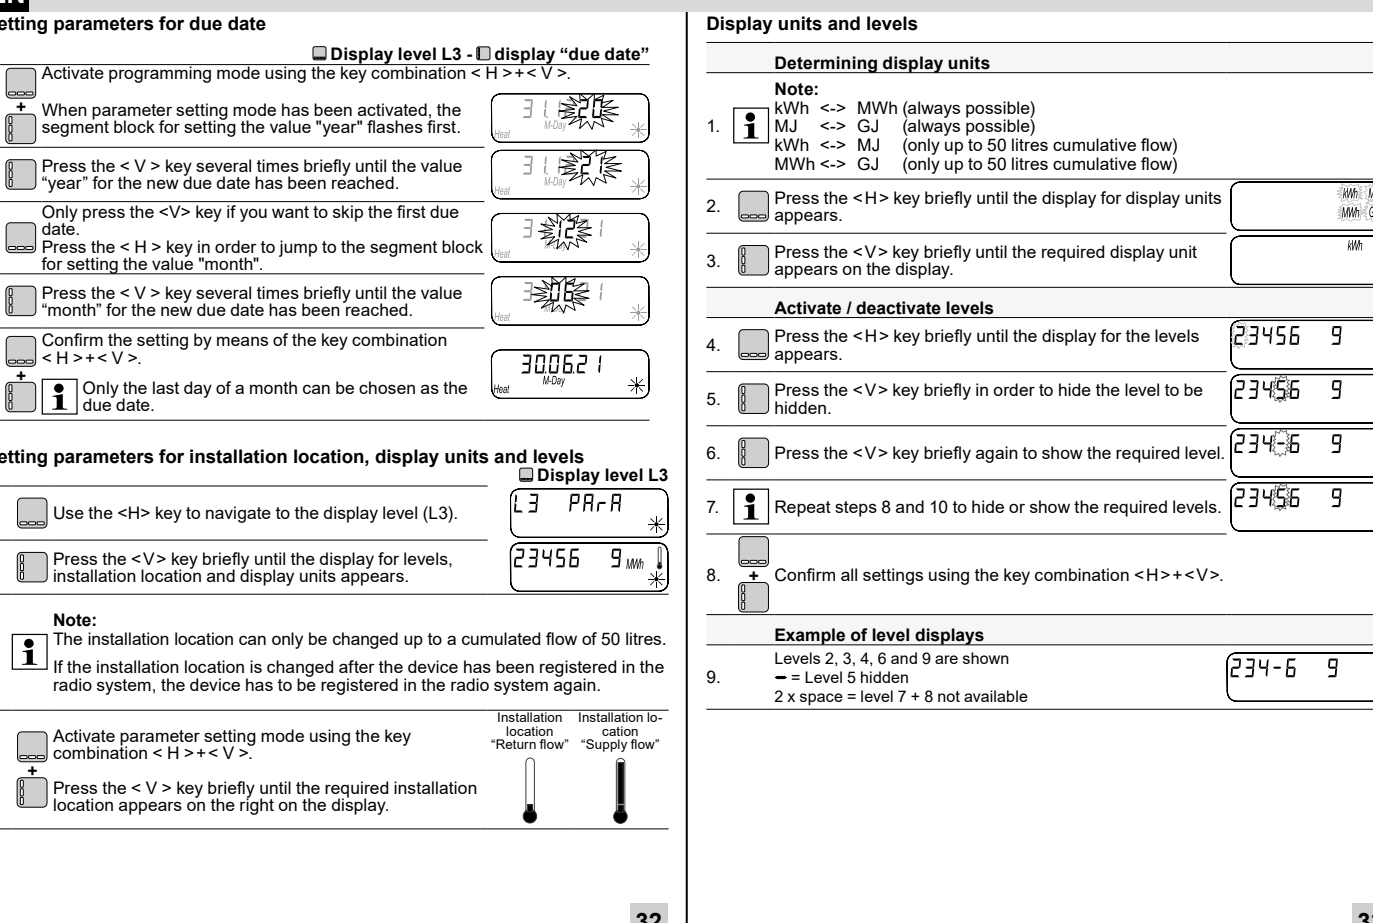

After you have aligned the flow sensor to the direction of flow of the medium, the clip adapter is placed in place behind the direction of flow arrow on the flow sensor.

Installation variants calculator unit

Placing the clip ring and locking it in place

EN	Symbols for warning notes
1	Disposal
2	For disposal purposes, this device is considered electronic waste as defined by European Directive 2012/19/EU (WEEE) and must not be disposed of as household waste.
3	Risk of scalding by hot water
4	An installed meter is a pressurized component. Filling only by trained experts.
5	Important notes
6	Please note the information in the notes and requirements.
EN	Symbols for installation notes
1	ISO 4064
2	Observe ISO 4064 when installing and commissioning the meter!
3	The sensor cables (e.g. temperature sensor cable) must be routed at a distance of at least 50 mm to sources of electromagnetic interference (switches, electric motors, fluorescent lamps).
4	Indirectly immersed installation variant
5	This variant is always recommended.
6	Indirectly immersed installation variant
7	Phase national and country-specific regulations concerning the use of immersion sleeves.
8	Direction of flow
9	Observe correct supply flow or return flow installation and the installation position (direction of flow) of the flow sensor.
10	Supplementary information
11	Helpful and supplementary installation information and commissioning.
12	Refer to operating instructions, operating conditions and installation requirements in accordance with EN 1434-4.
13	Control key on the meter
14	Horizontal movement in the operating menu.
15	Control key on the meter
16	Vertical movement in the operating menu.
17	Alternating or repeated displays.

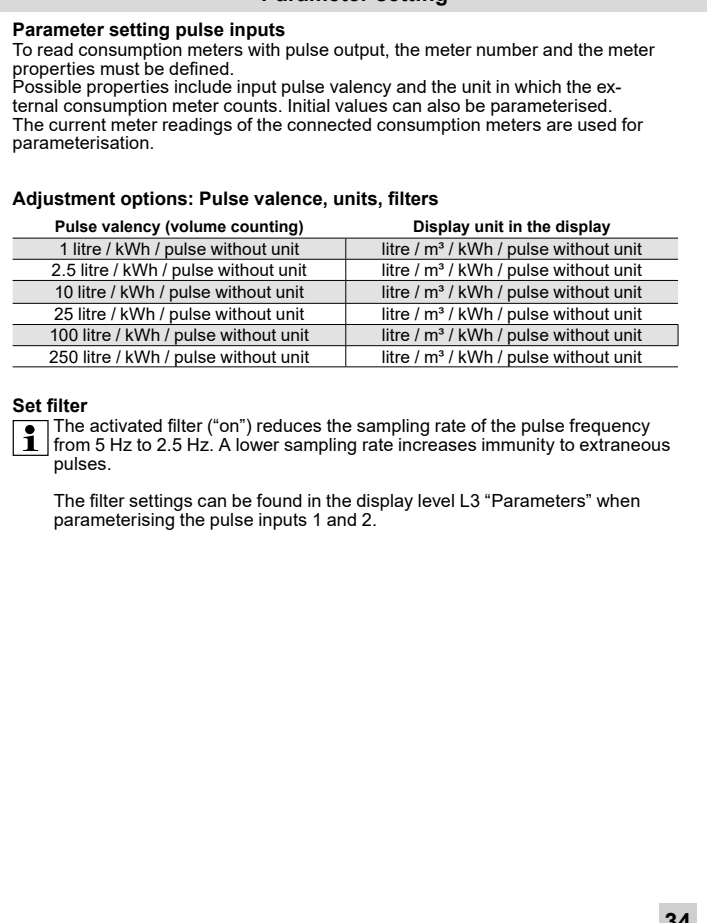

The clip ring is positioned in one of the four possible positions and clipped in place firmly. For this, the two engagement hooks (4) must be clearly heard clip in the recesses of the clip ring.

Attaching the calculator unit

PLEASE NOTE: When the calculator unit is pulled off the clip ring, there is a danger of the connection cable being damaged by sudden pulling on the calculator unit. On-site repair work is not possible.
