

Braukmann RV284

Controllable anti-pollution check valve EA type

APPLICATION

Check valves of this type are for use as an independent means of preventing reverse water flow.

They can also be used for industrial, commercial and similar systems where back pressure, backflow and back syphonage must be prevented.

The classicfications of appliances to meet these requirements are specified in EN 1717.

SPECIAL FEATURES

- Universal application
- Easy installation
- Low pressure loss
- Quiet operation
- Create no shock pressure loadings

CONSTRUCTION

Overview			
	1	Housing	Dezincification-resistant brass
	2	Test plug with seal ring	High-quality synthetic material
	Not depicted components:		
		Seal ring	EPDM
		Check valve insert (DVGW-certified)	High-grade synthetic material

METHOD OF OPERATION

Spring loaded check valves have a moving seal disc which is lifted off the seat by a greater or lesser amount depending on the flow rate through the valve. If the flow falls towards zero, then the spring pushes the disc back onto the seat and seals the waterway.

To ensure continuing correct function it is recommended that check valves be regularly checked and maintained (as specified in EN 1717).
