Legal information

Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

DANGER

indicates that death or severe personal injury will result if proper precautions are not taken.
--

WARNING
--

indicates that death or severe personal injury may result if proper precautions are not taken.

CAUTION
--

indicates that minor personal injury can result if proper precautions are not taken.
--

NOTICE

indicates that property damage can result if proper precautions are not taken.
--

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified Personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Innomotics products

Note the following:

WARNING
--

Innomotics products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Innomotics. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.
--

Trademarks

All names identified by ® are registered trademarks of Innomotics GmbH. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

Introduction

Note

The following pages contain the Siemens logo and the Siemens legal information.

Please note that since July 1st, 2023 the Siemens Businesses **Large Drives Applications** and **Low Voltage Motors** are part of **Innomotics GmbH**, Germany.

All rights to and product information on the following pages have been transferred from Siemens to Innomotics.

The re-branding of the document will take place in due course.

1.1 About SIMOGEAR

Description

SIMOGEAR is the Siemens product family of geared motors in Digital Industry.

1.2 Sales legislation

Typical use cases are listed in this product documentation and in the online help to illustrate possible application areas for our products. These are purely exemplary and do not constitute a statement relating to the suitability of the respective product for use in specific individual cases. Unless explicitly agreed as part of a contract, Siemens assumes no liability relating to such suitability. Suitability for a particular application in specific individual cases must be assessed by the user on a case-for-case basis, taking into account all technical, legal and other requirements. Always observe the descriptions of the technical features and the relevant constraints of the respective product provided in the product documentation.

1.3 About this manual

1.3.1 Content

Description

These operating instructions provide you with information about the geared motors and their associated components. You will learn about safely and professionally handling the geared motors – from the initial delivery up to final disposal:

- Transporting and storing
- Setup and mounting
- Connecting
- Commissioning
- Testing
- Operating
- Searching for and eliminating faults
- Disassembly
- Disposal

Keeping the documentation in a safe place

This documentation should be kept in a location where it can be accessed. Make the documentation available to the personnel that have been deployed.

Description

This documentation includes recommendations relating to third-party products. Siemens is aware of the fundamental suitability of these third-party products. You can use equivalent products from other manufacturers.

Siemens does not accept any warranty when using third-party products.

1.3.2 Target group

Description

These operating instructions address all personnel who work on a geared motor or use a geared motor.

1.3.3 Preventing hazards

The safety instructions provided in these operating instructions are intended to avoid personal injury and material damage. They also guarantee the function and a long service life of the geared motors.

- Read these operating instructions before handling the geared motors.
- Always follow the safety instructions and notices in these operating instructions.

The warning note concept is explained at the beginning of this documentation.

1.3.4 What is new in BA_2030_0523?

Main changes in this edition

Revisions

- Address changed from Siemens AG to Innomotics GmbH
- Front covers U1 and U4 adapted
- Chapter Rating plate data adapted-> Rating plate data (Page 123)
- Chapter Declaration of incorporation of partly completed machinery, Declaration of Conformity adapted -> Declaration of incorporation of partly completed machinery, Declaration of Conformity (Page 205)

1.3.5 Standard scope

Description

This documentation describes the functionality of the standard scope. This scope may differ from the scope of the functionality of the system that is actually supplied. The functions of the system delivered can only be found in the order documents.

Additional functions may be able to be executed in the system, which are not explained in this documentation. However, these functions cannot be claimed in the case of a new delivery or service.

This documentation does not contain all detailed information on all product types. Furthermore, this documentation cannot take into consideration every conceivable type of installation, operation and service/maintenance.

The machine manufacturer must document any additions or modifications made to the product.

1.3.6 Websites of third-party companies

Description

This document may contain hyperlinks to third-party websites. Siemens is not responsible for and shall not be liable for these websites and their content. Siemens does not check the information that appears on these websites and is not responsible for the content and information provided there. The user bears the full risk when visiting these websites.

1.4 SIMOGEAR documentation

Description

Comprehensive documentation on SIMOTICS, SIMOGEAR and on the SINAMICS converter family are provided in Internet (<https://support.industry.siemens.com/cs/de/en/ps/13204/man>).

You can display documents or download them in the PDF and HTML5 format.

The documentation is divided into the following categories:

Table 1-1 SIMOTICS / SIMOGEAR / SINAMICS documentation

Information	Documentation class ¹⁾	Content	Target group
General information	Configuration Manual	Rules, guidelines and tools for configuring products, systems, and plants. Further: Information about the operating and ambient conditions for hardware and software, the use of functions, as well as about circuit diagrams and terminal diagrams and the installation of software assuming that this is necessary for commissioning.	Planners, application engineers
Device information	Installation Instructions	All relevant information on setting up, installing and cabling as well as the required dimension drawings and circuit diagrams	Installation personnel, commissioning engineers, service and maintenance personnel

Information	Documentation class ¹⁾	Content	Target group
Basic information	Operating instructions	Comprehensive collection of all information necessary for the safe operation of products, plant/system parts and complete plants (IEC 82079)	Machine operators, plant operators
	Compact instructions	Essential contents of the operating instructions in abbreviated and compressed form	Machine operators, plant operators
	Product Information	Information that only becomes known shortly before or even after start of delivery and is therefore not included in the associated user documentation	Planners, configuration engineers, technologists, installation personnel, constructors; commissioning engineers, machine operators, programmers, service and maintenance personnel
	Online help	Instructions for configuring, programming and commissioning	Application engineers, programmers, commissioning engineers

¹⁾ Not all documentation classes are available for every SIMOTICS / SIMOGEAR / SINAMICS product.

1.5 Documentation on the Internet

The manuals for the motors, gearboxes and geared motors are available here: SIOS web site (<https://support.industry.siemens.com/cs/ww/en/ps/13424/man>)

1.6 Service and support

1.6.1 Siemens Industry Online Support on the Web

Description

The following is available via Siemens Industry Online Support (<https://support.industry.siemens.com/cs/ww/en/>), among others:

- Product support
- Global forum for information and best practice sharing between users and specialists
- Local contact persons via the contact person database (→ Contact)
- Information about field services, repairs, spare parts, and much more (→ Services)
- Search for product info

1.7 Important product information

- Important topics at a glance
- FAQs (frequently asked questions)
- Application examples
- Manuals
- Downloads
- Compatibility tool
- Newsletters with information about your products
- Catalogs/brochures

1.6.2 Spare parts services

Description

The online spare part service "Spares on Web" offers certain spare parts for the product:

- Website: SOW address (<https://www.sow.siemens.com/?lang=en>).

1.7 Important product information

1.7.1 Intended use

Ex-version gearboxes

The Ex gearbox fulfills the requirements of the Explosion Protection Directive 2014/34/EU and the UK Directive UK SI 2016:1107.

In the case of Ex-version gearboxes, observe the instructions marked with this symbol.

Designation of the gearbox	Use in zones with explosive gases, Zone:	Gas group of combustible liquid	Temperature Class of combustible liquid
 II 2G Ex h IIB T4 Gb	1, 2	IIA, IIB	T1 - T4
 II 2G Ex h IIC T4 Gb	1, 2	IIA, IIB, IIC	T1 - T4
 II 3G Ex h IIB T4 Gc	2	IIA, IIB	T1 - T4
 II 3G Ex h IIC T4 Gc	2	IIA, IIB, IIC	T1 - T4

Designation of the gearbox		Use in zones with explosive dusts, Zone:	Dust group of combustible dusts	Minimum ignition temperature of the explosive dusts
	II 2D Ex h IIIB T120°C Db	21, 22	IIIA, IIIB	>120 °C
	II 2D Ex h IIIC T120°C Db	21, 22	IIIA, IIIB, IIIC	>120 °C
	II 3D Ex h IIIB T120°C Dc	22	IIIA, IIIB	>120 °C
	II 3D Ex h IIIC T120°C Dc	22	IIIA, IIIB, IIIC	>120 °C

Note

Gearboxes and geared motors are partly completed machines for installation into machinery, or other partly completed machinery or equipment or plants, within the meaning of the current EC Machinery Directive 2006/42/EC and the UK directive "Supply of Machinery (Safety) Regulations 2008".

Based on the area of validity of these directives, commissioning is prohibited until it has been absolutely identified that the end product is in conformance with these directives.

The SIMOGEAR gearboxes and geared motors have been designed for stationary use in general mechanical engineering applications.

Unless otherwise agreed, the gearboxes and geared motors are intended for use in commercial applications in machinery, other partly completed machinery, or equipment or plants.

The gearboxes and geared motors are shipped in an operationally safe condition. Changes made by users could affect this operational reliability and are forbidden.

Note

The data on the rating plate assumes an installation altitude of up to 1 000 m above sea level.

The permissible ambient temperature is stamped on the rating plate.

For different installation altitudes and ambient temperatures, contact Technical Support.

The gearboxes have been designed for the applications described in the Technical data. Do not operate the gearbox outside the specified power limit. Other operating conditions must be contractually agreed.

Additional information for combinations of gearbox, adapter and motor

If motors are not mounted directly to the gearboxes (but instead via adapters), the company operating the motors must carefully ensure that the combination of gearbox, adapter and motor is only operated within the specified operating ranges and power limits of the motor component and the gearbox component.

The operating ranges and power limits of both components must be observed. For operating ranges and power limits of the gearboxes or geared motors, refer to Chapter Technical data.

The motor has been designed solely for the operating range described in the operating instructions applicable to the motor. Do not operate the motor outside its specified power limits. The applications that can be addressed by the motor and the power limits are stamped on the rating plate.

Do not climb on the gearbox. Do not place any objects on the gearbox.

1.7.2 Predictable incorrect use

WARNING

Injuries due to incorrect use

Death or severe injury can occur if you use the gearbox or the geared motor other than in the way intended by Siemens. You destroy or damage the gearbox or the geared motor.

Incorrect use includes, for example

- Not complying with the operating instructions
- Not observing the data on the rating plate
- Using the gearbox or geared motor in hazardous zones
- Using the gearbox or geared motor outside the permissible ambient conditions
- Using the gearbox or geared motor as generator
- Using the motor holding brake as an operating brake to reduce the motor speed
- Using the gearbox or geared motor as a result of its size, its weight, its shape or its material for applications other than those precisely described in this manual

Fundamental safety instructions

2.1 General safety instructions

WARNING

Electric shock and danger to life due to other energy sources

Touching live components can result in death or severe injury.

- Only work on electrical devices when you are qualified for this job.
- Always observe the country-specific safety rules.

Generally, the following steps apply when establishing safety:

1. Prepare for disconnection. Notify all those who will be affected by the procedure.
2. Isolate the drive system from the power supply and take measures to prevent it being switched back on again.
3. Wait until the discharge time specified on the warning labels has elapsed.
4. Check that there is no voltage between any of the power connections, and between any of the power connections and the protective conductor connection.
5. Check whether the existing auxiliary supply circuits are de-energized.
6. Ensure that the motors cannot move.
7. Identify all other dangerous energy sources, e.g. compressed air, hydraulic systems, or water. Switch the energy sources to a safe state.
8. Check that the correct drive system is completely locked.

After you have completed the work, restore the operational readiness in the inverse sequence.

WARNING

Electric shock due to connection to an unsuitable power supply

When equipment is connected to an unsuitable power supply, exposed components may carry a hazardous voltage. Contact with hazardous voltage can result in severe injury or death.

- Only use power supplies that provide SELV (Safety Extra Low Voltage) or PELV- (Protective Extra Low Voltage) output voltages for all connections and terminals of the electronics modules.

WARNING

Electric shock due to damaged motors or devices

Improper handling of motors or devices can damage them.

Hazardous voltages can be present at the enclosure or at exposed components on damaged motors or devices.

- Ensure compliance with the limit values specified in the technical data during transport, storage and operation.
- Do not use any damaged motors or devices.

WARNING

Electric shock due to unconnected cable shield

Hazardous touch voltages can occur through capacitive cross-coupling due to unconnected cable shields.

- As a minimum, connect cable shields and the conductors of power cables that are not used (e.g. brake cores) at one end at the grounded housing potential.

WARNING

Electric shock if there is no ground connection

For missing or incorrectly implemented protective conductor connection for devices with protection class I, high voltages can be present at open, exposed parts, which when touched, can result in death or severe injury.

- Ground the device in compliance with the applicable regulations.

WARNING

Arcing when a plug connection is opened during operation

Opening a plug connection when a system is in operation can result in arcing that may cause serious injury or death.

- Only open plug connections when the equipment is in a voltage-free state, unless it has been explicitly stated that they can be opened in operation.

NOTICE

Property damage due to loose power connections

Insufficient tightening torques or vibration can result in loose power connections. This can result in damage due to fire, device defects or malfunctions.

- Tighten all power connections to the prescribed torque.
- Check all power connections at regular intervals, particularly after equipment has been transported.

NOTICE**Damage to equipment due to unsuitable tightening tools.**

Unsuitable tightening tools or fastening methods can damage the screws of the equipment.

- Only use screw inserts that exactly match the screw head.
- Tighten the screws with the torque specified in the technical documentation.
- Use a torque wrench or a mechanical precision nut runner with a dynamic torque sensor and speed limitation system.
- Adjust the tools used regularly.

**WARNING****Unexpected machine movement caused by radio devices or mobile phones**

Using radio devices, cellphones, or mobile WLAN devices in the immediate vicinity of the components can result in equipment malfunction. Malfunctions may impair the functional safety of machines and can therefore put people in danger or lead to property damage.

- Therefore, if you move closer than 20 cm to the components, be sure to switch off radio devices, cellphones or WLAN devices.
- Use the "SIEMENS Industry Online Support App" or a QR code scanner only on equipment that has already been switched off.

**WARNING****Unrecognized dangers due to missing or illegible warning labels**

Dangers might not be recognized if warning labels are missing or illegible. Unrecognized dangers may cause accidents resulting in serious injury or death.

- Check that the warning labels are complete based on the documentation.
- Attach any missing warning labels to the components, where necessary in the national language.
- Replace illegible warning labels.

WARNING

Unexpected movement of machines caused by inactive safety functions

Inactive or non-adapted safety functions can trigger unexpected machine movements that may result in serious injury or death.

- Observe the information in the appropriate product documentation before commissioning.
- Carry out a safety inspection for functions relevant to safety on the entire system, including all safety-related components.
- Ensure that the safety functions used in your drives and automation tasks are adjusted and activated through appropriate parameterizing.
- Perform a function test.
- Only put your plant into live operation once you have guaranteed that the functions relevant to safety are running correctly.

Note

Important Safety instructions for Safety Integrated

If you want to use Safety Integrated functions, you must observe the Safety instructions in the Safety Integrated documentation.

WARNING

Active implant malfunctions due to electromagnetic fields

Electromagnetic fields (EMF) are generated by the operation of electrical power equipment, such as transformers, converters, or motors. People with pacemakers or implants are at particular risk in the immediate vicinity of this equipment.

- If this affects you, maintain the minimum distance to such equipment that is specified in the "Important product information" chapter.

WARNING

Active implant malfunctions due to permanent-magnet fields

Even when switched off, electric motors with permanent magnets represent a potential risk for persons with heart pacemakers or implants if they are close to converters/motors.

- If this affects you, maintain the minimum distance to such equipment that is specified in the "Important product information" chapter.
- When transporting or storing permanent-magnet motors always use the original packing materials with the warning labels attached.
- Clearly mark the storage locations with the appropriate warning labels.
- IATA regulations must be observed when transported by air.

**WARNING****Injury caused by moving or ejected parts**

Contact with moving motor parts or drive output elements and the ejection of loose motor parts (e.g. feather keys) out of the motor enclosure can result in severe injury or death.

- Remove any loose parts or secure them so that they cannot be flung out.
- Do not touch any moving parts.
- Safeguard all moving parts using the appropriate safety guards.

**WARNING****Fire due to incorrect operation of the motor**

When incorrectly operated and in the case of a fault, the motor can overheat resulting in fire and smoke. This can result in severe injury or death. Further, excessively high temperatures destroy motor components and result in increased failures as well as shorter service lives of motors.

- Operate the motor according to the relevant specifications.
- Only operate the motors in conjunction with effective temperature monitoring.
- Immediately switch off the motor if excessively high temperatures occur.

**CAUTION****Burns and thermal damage caused by hot surfaces**

Temperatures above 100 °C may occur on the surfaces of motors, converters, and other drive components.

Touching hot surfaces may result in burns. Hot surfaces may damage or destroy temperature sensitive parts.

- Ensure that temperature-sensitive parts do not come into contact with hot surfaces.
- Mount drive components so that they are not accessible during operation.

Measures when maintenance is required:

- Allow drive components to cool off before starting any work.
- Use appropriate personnel protection equipment, e.g. gloves.

2.2 Equipment damage due to electric fields or electrostatic discharge

Electrostatic sensitive devices (ESD) are individual components, integrated circuits, modules or devices that may be damaged by either electric fields or electrostatic discharge.

NOTICE

Equipment damage due to electric fields or electrostatic discharge

Electric fields or electrostatic discharge can cause malfunctions through damaged individual components, integrated circuits, modules or devices.

- Only pack, store, transport and send electronic components, modules or devices in their original packaging or in other suitable materials, e.g. conductive foam rubber or aluminum foil.
- Only touch components, modules and devices when you are grounded by one of the following methods:
 - Wearing an ESD wrist strap
 - Wearing ESD shoes or ESD grounding straps in ESD areas with conductive flooring
- Only place electronic components, modules or devices on conductive surfaces (table with ESD surface, conductive ESD foam, ESD packaging, ESD transport container).

2.3 Cybersecurity information

Siemens provides products and solutions with industrial cybersecurity functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial cybersecurity concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial cybersecurity measures that may be implemented, please visit
<https://www.siemens.com/cybersecurity-industry>.

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Cybersecurity RSS Feed under
<https://new.siemens.com/cert>.

Further information is provided on the Internet:

Industrial Security Configuration Manual (<https://support.industry.siemens.com/cs/ww/en/view/108862708>)

**WARNING****Unsafe operating states resulting from software manipulation**

Software manipulations, e.g. viruses, Trojans, or worms, can cause unsafe operating states in your system that may lead to death, serious injury, and property damage.

- Keep the software up to date.
- Incorporate the automation and drive components into a state-of-the-art, integrated industrial cybersecurity concept for the installation or machine.
- Make sure that you include all installed products in the integrated industrial cybersecurity concept.
- Protect files stored on exchangeable storage media from malicious software by with suitable protection measures, e.g. virus scanners.
- Carefully check all cybersecurity-related settings once commissioning has been completed.

2.4 Residual risks of power drive systems

When assessing the machine or system-related risk in accordance with the respective local regulations (e.g. EC Machinery Directive), the machine manufacturer or system integrator must take into account the following residual risks emanating from the control and drive components of a drive system:

1. Unintentional movements of driven machine or system components during commissioning, operation, maintenance, and repairs caused by, for example,
 - Hardware faults and/or software errors in the sensors, control system, actuators, and connections
 - Response times of the control system and of the drive
 - Operation and/or environmental conditions outside the specification
 - Condensation/conductive contamination
 - Parameterization, programming, cabling, and installation errors
 - Use of wireless devices/mobile phones in the immediate vicinity of electronic components
 - External influences/damage
 - X-ray, ionizing radiation and cosmic radiation
2. Unusually high temperatures inside and outside the components, including open flames, as well as emissions of light, noise, particles, gases, etc. due to fault conditions, e.g.:
 - Component failure
 - Software errors
 - Operation and/or environmental conditions outside the specification
 - External influences/damage
 - Short circuits or ground faults in the intermediate DC circuit of the converter
3. Hazardous shock voltages caused by, for example:
 - Component failure
 - Influence during electrostatic charging
 - Induction of voltages in moving motors
 - Operation and/or environmental conditions outside the specification
 - Condensation/conductive contamination
 - External influences/damage
4. Electrical, magnetic and electromagnetic fields generated in operation that can pose a risk to people with a pacemaker, implants or metal replacement joints, etc., if they are too close
5. Release of environmental pollutants or emissions as a result of improper operation of the system and/or failure to dispose of components safely and correctly

6. Influence of network-connected and wireless communications systems, e.g. ripple-control transmitters or data communication via the network or mobile radio, WLAN or Bluetooth.
7. Motors for use in potentially explosive areas:
When moving components such as bearings become worn, this can cause enclosure components to exhibit unexpectedly high temperatures during operation, creating a hazard in areas with a potentially explosive atmosphere.

For more information about the residual risks of the drive system components, see the relevant sections in the technical user documentation.

Specific safety instructions

3.1 General overview

Ex-version of gearbox and geared motor

This symbol marks notes and measures.

This symbol applies to gearboxes and geared motors in an Ex-version.

Note

Siemens does not accept any liability for damage and operating faults that result from the non-observance of these operating instructions.

Note

EU RoHS Directive and UK Directive

SIMOGEAR geared motors comply with the stipulations laid down in Directive 2011/65/EU and UK directive "The Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment Regulations 2012" regarding restrictions relating to the use of hazardous substances.

These operating instructions are included with the gearbox when delivered or you can find them in SIOS (<https://support.industry.siemens.com/cs/ww/en/ps/13424/man>). Read the operating instructions before handling the gearbox. Carefully follow the instructions. This is how you ensure safe and disturbance-free function.

These operating instructions apply to the standard version of SIMOGEAR gearboxes.

Table 3-1 Definition of terms

Term	Explanation
Gearbox, gearbox component	Helical, parallel shaft, bevel, helical worm and worm gearboxes
Motor, motor component, servomotor, asynchronous motor	Motor that is mounted on the gearbox.
Adapter	Mechanical assembly for transferring speed and torque from the motor to the gearbox.
Geared motor, gearbox and motor combination, unit, gearbox-adapter-motor-unit; overall drive	Mechanical assembly (unit) consisting of the components gearbox (adapter if applicable) and motor.

Note

In addition to these operating instructions, special contractual agreements and technical documentation apply to a special gearbox design and the associated supplementary equipment.

When using additional components, carefully observe the notes in the associated documentation.

Refer to the other operating instructions and safety instructions supplied with the product.

Valid operating instructions for SIMOGEAR

Can be found in SIOS (<https://support.industry.siemens.com/cs/ww/en/ps/13424/man>)

- BA 2030 - operating instructions for SIMOGEAR gearboxes
- BA 2031 - operating instructions for permissible mounting position deviations of SIMOGEAR gearboxes
- BA 2039 - operating instructions for adapters for mounting on SIMOGEAR gearboxes
- BA 2330 - operating instructions for motors for mounting onto SIMOGEAR gearboxes
- BA 2331 - Operating instructions for geared motors with DRIVE-CLiQ safety-related encoder for safety-related applications
- BA 2332 - operating instructions for geared motors with holding brake for safety-related applications
- BA 2535 - Operating instructions for SIMOGEAR gearboxes for monorail conveyors
- BA 2730 - Operating instructions for SIMOGEAR geared motors with encoder for safety-relevant applications
- Operating instructions for geared motors for mounting onto a G115D Motor Mounted

Document ID A5E44455710A
Low-voltage motors 1MB..1/2/3/4 - shaft heights 63 ... 355 (<https://support.industry.siemens.com/cs/de/en/view/109757981>)

The described gearboxes and geared motors are state-of-the-art at the time these operating instructions were printed.

Siemens reserves the right to change individual components and accessory parts in the interest of ongoing development. The changes serve to improve the performance and safety. The significant features are retained. The operating instructions are always being updated with new contents.

The new versions of the operating instructions, the declaration of incorporation and the Declarations of Conformity are available in SIOS (<https://support.industry.siemens.com/cs/ww/en/ps/13424/man>).

3.2 Installation notes

NOTICE
Impermissible housing loadings when unevenness present Ensure that the housing feet and flanges are screwed together without distortion. The foundation structure must be low-vibration, level and torsionally rigid. The evenness of the mounting surface for gearboxes in foot and flange design must be according to DIN ISO 2768-2. Max. deviations are to be taken from the tolerance class K. Thoroughly remove any dirt from the foundation and the screw mounting surface of the gearbox.
NOTICE
Impermissible external forces No additional external forces resulting from customer-specific attachments, support of other components on the gearbox or geared motor are permitted. The installation of original attachments (oil expansion unit, cover hoods, etc.) and the resulting forces are permitted.

Prerequisites for smooth, vibration-free running

- Stable foundation design
- Precise alignment of the machine
- Correct balancing of the parts to be mounted on the shaft extension
- Compliance with vibration severity values according to ISO 20816-1

Vibration severity

Due to the influencing variables listed below, the vibration response of the system at the location of use can lead to increased vibration severity on the drive unit:

- Transmission elements
- Installation conditions
- Alignment and installation
- Effects of external and internal oscillation

The vibration severity values specified in accordance with ISO 20816-1 must not be exceeded at any point on the surface of the drive. This ensures problem-free operation and a long service life.

Maximum permissible vibration severity

Observe the values for the maximum permissible radial and axial oscillation vibration severity in the following table. Radial/axial refers to the motor axes.

Maximum permissible radial vibration levels

Vibration frequency	Vibration value
< 6.3 Hz	Vibration displacement $s \leq 0.16 \text{ mm}$
6.3 Hz to 250 Hz	Vibration velocity $v_{\text{rms}} \leq 4.5 \text{ mm/s}$
> 250 Hz	Vibration acceleration $a_{\text{peak}} \leq 10 \text{ m/s}^2$

Maximum permissible axial vibration severity

Vibration velocity	Vibration acceleration
Vibration velocity $v_{\text{rms}} \leq 4.5 \text{ mm/s}$	Vibration acceleration $a_{\text{peak}} \leq 10 \text{ m/s}^2$

Resonant frequencies

Resonance can occur in the speed range of the geared motor depending on the machine to be driven.

Operation in resonance causes increased noise and vibration levels.

Adherence to the maximum permissible vibration severity is always required.

Operation in the resonant frequency leads to a reduced service life of the geared motor, irrespective of adherence to the maximum vibration severity.

Continuous operation in the resonant frequency must be avoided.

3.3 Residual risks when operating geared motors

The geared motors may be operated only if all protective equipment is used.

Geared motors may be handled only by qualified and instructed qualified personnel that knows and observes all safety instructions for the geared motors that are explained in the associated technical user documentation.

3.4 Geared motor with encoder for safety-relevant applications

For a SIMOGEAR geared motor with rotary encoder for safety-relevant applications, carefully observe the information provided in operating instructions BA 2331 or BA 2730. These operating instructions are valid for functionally safe rotary encoders that are mounted onto SIMOGEAR geared motors. The functionally safe rotary encoders are in compliance with the relevant standards for safety-relevant applications listed in the Declaration of Conformity of BA 2730.

The SIMOGEAR geared motor with functionally safe rotary encoder has a signal yellow marking on the fan cover. Marking SI04 for the functionally safe rotary encoder is stamped on the rating plate. The safety level is marked on the functionally safe rotary encoder itself.

Figure 3-1 Marking for functional safety

3.5 Specific hazard types and fundamental obligations

WARNING

Hot, escaping oil

Before starting any work wait until the oil has cooled down to below +30 °C.

WARNING

Poisonous vapors when working with solvents

Avoid breathing vapors when working with solvents.

Ensure adequate ventilation.

WARNING

Risk of explosion when working with solvents

Ensure adequate ventilation.

Do not smoke.

The company operating the unit must ensure that all persons assigned to work on the geared motor have read and understood these operating instructions and that they comply with them in all points in order to:

- Eliminate the risk to life and limb of users and others
- Ensure the operational safety of the geared motor.
- Avoid disruptions and environmental damage through incorrect use.

Comply with the following safety instructions:

In addition to the specified personal protection gear, also wear suitable protective gloves and safety glasses.

Comply with the instructions on the rating plates attached to the geared motor. The rating plates must be kept free from paint and dirt at all times. Replace any missing rating plates.

Collect and dispose of used oil in accordance with regulations. Immediately remove any spilt oil with an oil-binding agent.

Do not use high-pressure cleaning equipment or sharp-edged tools to clean the geared motor.

The machine OEM who installs the geared motors in a plant must include the regulations contained in these operating instructions in its own operating instructions.

During operation, comply with the vibration levels according to ISO 20816-1. Maximum permissible vibration values can be found in Installation notes (Page 29).

Technical description

4.1 General technical description

The gearbox is supplied with one, two or three transmission stages.

The gearbox is suitable for various mounting positions. Check the correct oil level.

Gearbox housing

The housings for sizes 19 and 29 are made of die-cast aluminum.

Depending on the gearbox type, the housings of sizes 39 and 49 are made of die-cast aluminum or cast iron.

The gearbox housing of worm geared motor S is manufactured out of die-cast aluminum.

Table 4-1 Housing material

Gearbox type	Size		
	39	39A	49
Helical gearbox E	Cast iron		Cast iron
Helical gearbox D/Z	Aluminum		Cast iron
Parallel shaft gearbox F	Cast iron		Cast iron
Bevel gearbox B	Aluminum		Aluminum
Bevel gearbox K	Cast iron		Cast iron
Helical worm gearbox C		Aluminum	Cast iron

From size 59, the gearbox housings are made of cast iron.

Geared components

The geared components are hardened and ground.

For the helical worm gearbox, the worm is hardened and ground. The gear is manufactured from high-quality bronze.

The bevel gear stage of the bevel gearbox is lapped in pairs.

The gear of the worm geared motor is manufactured out of high-quality bronze.

Lubrication

The intermeshing parts are supplied with lubricant by means of splash lubrication.

The worm geared motor is lubricated for life with high-quality synthetic oil.

Shaft bearings

All shafts are mounted in rolling bearings. The rolling bearings are lubricated using splash lubrication or oil-spray lubrication. Bearings that are not supplied with lubricant are closed and grease-lubricated.

4.2 Technical description of the XLplus and VLplus heavy-duty bearing systems

XLplus and VLplus heavy-duty bearing systems

Figure 4-1 XLplus and VLplus heavy-duty bearing systems

The multi-stage helical gearbox sizes 89-169 can be supplied with an XLplus or VLplus heavy-duty bearing system.

The parallel-shaft gearbox and the helical gearbox sizes 89-169 can be supplied with a VLplus heavy-duty bearing system.

With an upstream locating bearing, the bearing system is suitable for high external forces. The absorbed radial and axial loads are transmitted to the machine via the flange.

The bearings are lubricated independently of the frame size. Initial greasing has already been carried out. The relubrication is made with the provided grease nipple.

Options for the VLplus heavy-duty bearing system:

An automatic regreasing device ② can be supplied as option. The automatic regreasing device ② can be installed at any position and can be used underwater.

A dry-well version with oil sight glass ④ or oil sensor ⑤ can be supplied as option. The dry-well version offers increased protection against oil leaks when the output shaft points down. The flange captures any escaping gear oil for leakages at the oil chamber. The escaping oil is signaled optically with an oil sight glass ④ or electronically by an oil sensor ⑤. If the oil sensor ⑤ is deployed in Ex-version gearboxes, the sensor must be operated with a disconnecter approved for Ex.

4.3 Shaft seals

The shaft sealing rings on the output side prevent lubricant from escaping from the housing at the shaft outlet and prevent pollution from entering the housing.

The optimum use of the seals depends on the ambient conditions and the lubricant being used.

Radial shaft sealing ring

A high-quality radial shaft sealing ring is used as standard seal. The ring is provided with an additional dust lip to protect against contaminants from outside.

Permitted oil sump temperatures -40° C to +80° C.

Seal for a longer service life (optional)

The radial shaft sealing ring with dust lip has an additional buffer axial seal towards the inside of the gearbox. The sealing system has a high degree of reliability as a result of the insensitivity with respect to contaminations in the oil.

Permitted oil sump temperatures -40° C to +100° C.

Seal to handle increased environmental stress (optional)

This seal is equipped with an additional fiber disk. The disk so provides increased protection against higher environmental stress caused by dirt and dust.

Permitted oil sump temperatures -20° C to +80° C.

High temperature-resistant seal (optional)

The deployed radial shaft sealing rings are made of a temperature-resistant material.

Permitted oil sump temperatures -25° C to +110° C.

4.4 Cooling

NOTICE**Dust deposits prevent heat radiation**

Dust deposits prevent heat radiation and cause a high housing temperature.

Keep the gearbox free from dirt, dust, etc.

The gearbox does not normally require additional cooling. The generously dimensioned housing surface is sufficient for dissipating heat losses where there is free convection. If the housing temperature exceeds a value of +80 °C, please contact Technical Support.

4.5 Rating plate

The rating plate of the gearbox or geared motor is printed on a labeled polyester film or optionally on a stainless steel rating plate. The rating plate is glued using a special masking film. The film ensures permanent resistance to UV radiation and media of all kinds, such as oils, greases, salt water and cleaning agents.

The adhesive and material ensure firm adhesion and long-term readability throughout the operating temperature range of the gearbox and geared motor.

The edges of the rating plate are paint-finished to match the color of the gearbox or motor to which it is affixed.

4.6 Surface treatment

4.6.1 General information on surface treatment

All paint finishes are sprayed on.

Ex-version of gearbox and geared motor

The gearbox is delivered complete with primer and paint finish.

If the gearbox is delivered with primer only or unpainted, then a paint finish must be applied which conforms with the applicable guidelines for the specific application. The primer does not provide corrosion protection.

Worm geared motor S in Ex-version

As standard, the worm geared motor is not painted.

The worm geared motor is optionally delivered complete with primer and paint finish.

Ex-version of gearbox and geared motor

When applying conductive paint, the operating company must ensure that the paint remains in a perfect state.

The paint finish must be checked at intervals of 2 - 3 years.

Ex-version of gearbox and geared motor

An excessively high electrostatic charging must be avoided.

Ensure that highly active mechanisms that cause the paint finish to generate a charge are avoided.

Highly active mechanisms that can generate charges:

- Fast air with high dust content directed past the gearbox
- Sudden escape of compressed gases that contain particles
- Harsh abrasive procedures, this does not mean manual cleaning / wiping with cloths.

WARNING

Danger due to electrostatic discharge

For paint finishes in explosion group III, the paint can be electrostatically charged as a result of intensive dust turbulence or processes with high levels of electrostatic charging.

Risk of explosion as a result of processes with high levels of electrostatic charging

Minimize the risk of electrostatic charging by applying effective measures according to IEC 60079-32-1.

NOTICE**Failure of the external protection**

If the paint finish is damaged, the geared motor may corrode.

Do not damage the paint finish.

Note

Information about the ability to be repainted does not guarantee the quality of the paint product supplied by your supplier.

Only the paint manufacturer is liable for the quality and compatibility.

Note

C1 paints are not suitable for ambient air temperatures below -20° C.

4.6.2 Painted version

The corrosion protection system is classified according to the corrosiveness categories in DIN EN ISO 12944-2.

Paint according to corrosiveness categories

Paint system	Description
Corrosiveness category C1, unpainted for gearbox and motor housings made of aluminum	
-	- Indoor installation - Heated buildings with neutral atmospheres - Resistance to greases and some resistance to mineral oils, aliphatic solvents - Standard

Paint system	Description
Corrosiveness category C1 for normal environmental stress	
1-component hydro paint, top coat	- Indoor installation - Heated buildings with neutral atmospheres - Resistance to greases and some resistance to mineral oils, aliphatic solvents - Standard paint for gearbox housings made of cast iron

4.6 Surface treatment

Paint system	Description
Corrosiveness category C2 for low environmental stress	
2-component - polyurethane top coat	- Indoor and outdoor installation - Unheated buildings with condensation, production areas with low humidity, e.g. warehouses and sports facilities - Atmospheres with low levels of pollution, frequently rural areas - Resistance to greases, mineral oils and sulfuric acid (10 %), caustic soda (10 %) and is conditionally resistant to aliphatic solvents

Paint system	Description
Corrosiveness category C3 for medium environmental stress	
2-component epoxy zinc phosphate base coat, 2-component polyurethane top coat	- Indoor and outdoor installation - Production areas with high humidity and some air contamination, e.g. food production areas, dairies, breweries and laundries - Urban and industrial atmospheres, moderate contamination from sulfur dioxide, coastal areas with low salt levels - Resistance to greases, mineral oils, aliphatic solvents, sulfuric acid (10 %), caustic soda (10 %)

Paint system	Description
Corrosiveness category C4 for high environmental stress	
2-component epoxy zinc phosphate base coat, 2-component polyurethane top coat	- Indoor and outdoor installation - Chemical plants, swimming pools, wastewater treatment plants, electroplating shops, and boathouses above seawater - Industrial areas and coastal areas with moderate salt levels - Resistance to greases, mineral oils, aliphatic solvents, sulfuric acid (10 %), caustic soda (10 %)

Paint system	Description
Corrosiveness category C5 for very high environmental stress	
2-component epoxy zinc phosphate base coat, 2-component polyurethane intermediate coat, 2-component polyurethane top coat	- Indoor and outdoor installation - Buildings and areas with almost constant condensation and high levels are contamination, e.g. malt factories and aseptic areas - Industrial areas with high humidity and aggressive atmosphere, coastal areas and offshore environments with high salt levels - Resistance to greases, mineral oils, aliphatic solvents, sulfuric acid (10 %), caustic soda (20 %)

In case of corrosiveness category C1, overpainting with a 1-component hydrosystem after prior rubbing down is possible.

In case of corrosiveness categories C2 to C5, overpainting with 2-component polyurethane paint, 2-component epoxide paint and 2-component acrylic paint after prior rubbing down is possible.

4.6.3

Primed version

Primer according to corrosiveness category

Paint system	Can be overpainted with
Unpainted corrosiveness category C1	
Cast iron parts immersion primed, steel parts primed or zinc-plated, aluminum and plastic parts untreated	- Synthetic paint, synthetic resin paint, oil paint 2-component polyurethane paint 2-component epoxy paint

Paint system	Can be overpainted with
Primer according to corrosiveness category C2 G	
2-component epoxy zinc phosphate, specified coat thickness 60 µm	2-component - polyurethane paint 2-component - epoxy paint 2-component - acrylic paint - Acid-hardening paint

Paint system	Can be overpainted with
Primer according to corrosiveness category C4 G	
2-component epoxy zinc phosphate, desired coat thickness 90 µm	2-component - polyurethane paint 2-component - epoxy paint 2-component - acrylic paint - Acid-hardening paint

4.7 Ex ignition hazards in accordance with EN 80079-37

Ex-version gearboxes

Ex marking

Regardless of the type of protection, the letter »h« is always assigned. In addition to the marking on the rating plate, the valid types of protection below are applied:

Constructional safety "c"

Constructional safety is ensured by selecting suitable materials and components, dimensioning the product for the customer's application, suitable sealing systems, adequate lubrication of rolling bearings, geared components and seals and by thermal testing.

Liquid immersion "k"

The liquid immersion is achieved through oil bath lubrication. Refer to the type plate and the operating instructions for the original oil filling.

Monitoring ignition sources "b"

Monitoring ignition sources is achieved by monitoring the temperature and/or electrically monitoring the oil level.

Ex-version of gearbox and geared motor

Servicing and maintenance work that are relevant for the type of protection shall only be carried out by SIEMENS service personnel or by SIEMENS authorized partners.

Goods received, transport and storage

5.1 Incoming goods

NOTICE
Transport damage Neither install nor commission damage products

Note

If you do not install the product immediately, do not remove or damage any of the packaging because this serves as preservation and/or corrosion protection

Note

Check that the technical specifications are in accordance with the purchase order.

Inspect the delivery immediately on arrival for completeness and any transport damage.

When you receive the goods, immediately check them for any transport damage. Immediately report any transport damage that is identified to the transport company.

The gearbox or geared motor is delivered in a fully assembled condition. Additional items are shipped in separate packaging if applicable.

The products supplied are listed in the dispatch papers.

5.2 Transport

5.2.1 General information on transport

NOTICE
The use of force will damage the gearbox or geared motor Transport the gearbox or geared motor carefully. Avoid knocks. Before putting the drive into operation, remove any transport fixtures and keep them safe or render them ineffective. You can then use them again for transporting further items or you can apply them again.

Different forms of packaging may be used, depending on the size of the gearbox or geared motor and the method of transport. Unless contractually agreed otherwise, the seaworthy

5.2 Transport

packaging complies with HPE Packaging Guidelines (Bundesverband Holzpackmittel Paletten Exportverpackungen e.V., the German Federal Association for wooden packaging, pallets, and export packaging).

Note the symbols which appear on the packaging. These have the following meanings:

5.2.2 Fastening for suspended transport

WARNING

Inadequately fastened gearboxes or geared motors can break loose

Use only the transport eye or eyebolt of the gearbox to transport the gearbox or geared motor. The eye and the bolt are designed only for the weight of the gearbox or geared motor. It is not permissible to add additional loads to the eye and bolt.

Do not rig eyebolts to the front threads at the shaft ends for transportation purposes.

Existing eyebolts and cast-on lifting eyes on the motor housing are not designed to support the entire unit. If you lift the unit only by the eyebolts or lifting eyes on the motor housing, the eyebolts may be ripped out of the threads or the lifting eyes may break off and cause serious or fatal injury. Use eyebolts or lifting eyes on the motor housing only for position stabilization.

Observe the maximum specified load on the eyebolt. Stress applied transversely to the ring plane is not permissible. Do not use bent or damaged eyebolts.

Use additional, suitable lifting accessories for transport or during installation.

When attaching using several chains and ropes, 2 cable/chain strands must be sufficient to carry the complete load. Secure lifting accessories against slipping.

- ① Transport eye gearbox
Support for the geared motor unit.
- ② ATTENTION!
Eyebolt motor housing
Sole support of the entire geared motor unit not permitted!
Support only for position stabilization.

Figure 5-1 Use of transport eye and eyebolt

Table 5-1 Maximum load of the eyebolt on the gearbox

Thread size	m	d ₃	Thread size	m	d ₃
	kg	mm		kg	mm
M8	140	36	M20	1200	72
M10	230	45	M24	1800	90
M12	340	54	M30	3 200	108
M16	700	63	-	-	-

The eyebolt corresponds to DIN 580.

Procedure

1. Transport the gearbox or geared motor by the lifting eyes or eyebolts on the gearbox housing.
2. The lifting eyes and eyebolts are designed only for the weight of the gearbox or geared motor. It is not permissible to add additional loads such as built-on parts on the gearbox to the lifting eyes and eyebolts.
3. Remove any eyebolts that are no longer required after transport.

You have prepared the gearbox or geared motor for transport.

5.3 Storage

5.3.1 General information for storage

WARNING
Danger of serious injuries caused by falling objects
Danger of damage to the gearbox when stacked
Do not stack gearboxes or geared motors on each other.

NOTICE
Failure of the external protection
Mechanical damage, chemical damage and thermal damage, such as scratches, acids, alkalis, sparks, welding beads and heat cause corrosion.
Do not damage the paint finish.

Unless contractually agreed otherwise, the guarantee period for the standard preservative lasts 6 months from the date of delivery.

In the case of storage in transit over 6 months, special arrangements must be made for preservation. Contact Technical Support.

Store the gearbox or geared motor in dry, dust-free rooms that are maintained at a constant temperature.

The storage location must be vibration- and shock-free.

The free shaft ends, sealing elements and flange surfaces must have a protective coating.

Do not store the geared motor on the fan cover.

5.3.2 Storage up to 36 months with long-term preservation (optional)

5.3.2.1 General notes for storage up to 36 months

Store the gearbox or geared motor in dry, dust-free rooms that are maintained at a constant temperature. Special packing is then not necessary.

If such premises are not available, pack the gearbox or the geared motor in plastic film or air-tight sealed film and materials. The films and materials must be able to accept moisture. Cover them to provide protection against heat, direct sunlight and rain.

The permissible ambient temperature is -25 °C to +50 °C.

The life of the corrosion protection is 36 months from delivery.

5.3.2.2 Gearbox filled with operating oil and anti-corrosive agent

NOTICE
Damage to the gearbox caused by incorrect oil quantities Check the oil level before commissioning. Observe the information and procedures for Checking the oil level (Page 94).

The gearbox is filled with oil corresponding to the mounting position so that it is ready for operation, and is sealed airtight using a screw plug or with a pressure breather valve with transport fixture.

For storage up to 36 months, a VCI anti-corrosion agent (**Volatile Corrosion Inhibitor**) is added.

5.3.2.3 Gearbox completely filled with oil

NOTICE
Damage to the gearbox caused by incorrect oil quantities Prior to commissioning, remove excessive oil until it has the correct oil level. Observe the information and procedures for Correcting the oil level (Page 94).

When biodegradable oils or oils for the food-processing sector are used, the gearbox is filled completely with operating oil. The gearbox is closed air-tight with a sealing plug or a pressure venting with transport fixture.

Do not lower the oil level during short-time commissioning for 10 minutes in no-load operation.

5.3 Storage

Mounting

6.1 Unpacking

Remove and dispose of the packaging material and transport equipment in compliance with regulations.

6.2 General information on installation

Ex-version of gearbox and geared motor

Effect on bearings of stray electric currents from electrical equipment.

When mounting the gearbox on or connecting it to the machine, take care to ensure potential equalization. The information on grounding and equipotential bonding provided by the motor supplier must be observed.

WARNING

Operating under load

Under load, the system can start or reverse in an uncontrolled fashion.

The entire system must be load-free so that there is no danger during this work.

NOTICE

Destruction caused by welding

Welding destroys the geared components and the bearings.

Do not weld on the gearbox or the geared motor. The gearbox or the geared motor must not be used as a grounding point for welding operations.

NOTICE

Overheating caused by solar radiation

Overheating of the gearbox or the geared motor due to exposure to direct sunlight.

Provide suitable protective equipment such as covers or roofs. Prevent heat accumulation.

NOTICE

Malfunction resulting from foreign objects

The operating company must ensure that no foreign objects impair the function of the gearbox or geared motor.

NOTICE**Damaged components impair the correct function of the gearbox or geared motor**

If any components are damaged, the correct function of the gearbox or geared motor is no longer guaranteed.

Do not install any damaged gearbox components.

NOTICE**Violation of the maximum permissible oil sump temperature**

The oil sump temperature will be exceeded if the temperature monitoring equipment is incorrectly set.

An alarm must be output when the maximum permissible oil sump temperature is reached. The geared motor must be switched off when the maximum permissible temperature is exceeded. The machine will come to a standstill if the geared motor is shut down.

Exercise particular care during mounting and installation. The manufacturer cannot be held liable for damage caused by incorrect mounting and installation.

Ensure that there is sufficient space around the gearbox or geared motor for installation, maintenance and repair work.

On geared motors with a fan, leave sufficient free space for the entry of air. Observe the installation conditions for the geared motor.

Provide sufficient lifting gear at the start of mounting and fitting work.

Observe the mounting position specified on the rating plate. This ensures that the correct quantity of lubricant is provided.

Use all the fastening means that have been assigned to the particular mounting position and mounting type.

Cap bolts cannot be used in some cases due to a lack of space. In such cases, please contact Technical Support quoting the type of gearbox.

For inclined mounting positions or extreme environmental effects, protect the drive by applying additional measures (e.g. a laterally mounted weather protection canopy).

6.3 Thread sizes and tightening torques for fastening bolts

The general tolerance for the tightening torque is 10%. The tightening torque is based on a friction coefficient of $\mu = 0.14$.

Table 6-1 Tightening torques for fixing screws

Thread size	Tightening torque for property class		
	8.8	10.9	12.9
	Nm	Nm	Nm
M4	3	4	5
M5	6	9	10

Thread size	Tightening torque for property class		
	8.8	10.9	12.9
	Nm	Nm	Nm
M6	10	15	18
M8	25	35	41
M10	50	70	85
M12	90	120	145
M16	210	295	355
M20	450	580	690
M24	750	1 000	1 200
M30	1 500	2 000	2 400
M36	2 500	3 600	4 200

6.4 Gearbox with foot mounting

Design and construct the foundation in such a way that no resonance vibration occurs and no vibration is transmitted from adjacent foundations.

The foundation structure on which the gearbox is to be mounted must be torsionally rigid. Design and construct the foundation taking into account the weight and torque of the forces acting on the gearbox. If the substructure is too weak, it will cause radial or axial displacement offset during operation that cannot be measured at a standstill.

If the gearbox is fastened to a concrete foundation, use foundation blocks for the appropriate recesses.

Align and grout the slide rails into the foundation.

Align the gearbox carefully with the units on the input and output side. Take into account the elastic deformation due to operating forces.

Prevent displacement from external forces due to lateral impacts.

Use stud bolts or headless screws of strength class 8.8 or higher for the mounting foot. Comply with the tightening torque.

Table 6-2 Thread size of the fastening bolt

Thread size	Helical gearbox		Parallel shaft gearbox F	Bevel gearbox B, K	Helical worm gearbox C	Worm geared motor S
	E	D/Z				
	Size					
M8	-	19, 29, 39	29, 39	B19, B29, B39	29	09, 19, 29
M10	39	-	49	B49, K39, K49	39A, 39, 49	-
M12	49	49, 59, 69	69, 79	K69, K79	69	-
M16	69, 89	79, 89	89, 109	K89	89	-
M20	109, 129	109	129	K109	-	-
M24	-	129	149	K129	-	-

6.5 Gearbox with flange fastening

Thread size	Helical gearbox		Parallel shaft gearbox F	Bevel gearbox B, K	Helical worm gearbox C	Worm geared motor S
	E	D/Z				
	Size					
M30	149	149	169	K149	-	-
M36	-	169, 189	189	K169, K189	-	-

6.5 Gearbox with flange fastening

Note

Siemens recommends an anaerobic adhesive to enhance the friction lock between flange and mounting surface.

Table 6-3 Thread size of the fastening bolt

Thread size	Flange	Helical gearbox E, D/Z	Parallel shaft gearbox F	Bevel gearbox B, K	Helical worm gearbox C
		Size			
M6	A120	19, 29, 39	29	B19, B29	29
M8	A140, A160	19, 29, 39, 49, 59	29, 39	B29, B39, K39	29, 39
M10	A200	39, 49, 59, 69	49	B39, B49, K49	49, 69
M12	A250, A300	49, 59, 69, 79, 89, 109	69, 79, 89	K69, K79, K89	89
M16	A350	79, 89, 109, 129, 149	109	K109	-

1) Use suitable washers under the nuts / bolt heads

6.6 Gearboxes in foot or flange version

NOTICE

Impermissible housing loadings caused by incorrectly installed add-on elements

Do not subject the gearbox housing to excessive stress by adding add-on elements to the foot or flange.

Add-on elements must not transmit forces, torques, and vibrations to the gearbox.

To prevent strains on the housing, fasten the gearbox only on the flange or the foot fastening for force and torque transmission. Refer to Gearbox with foot mounting (Page 49).

The second mounting option (foot or flange) is intended for add-on elements, e.g. protection covers with an intrinsic weight of up to max. 30 % of the weight of the gearbox.

6.7 Gearbox with C-type housing flange

The gearbox with C-type housing flange is delivered ready for mounting on machines. It is mounted using an inner centering. Depending on the version, the sealing rings are pressed in deeper at the DE and/or NDE so that simple mounting is ensured.

Note

If the inserted sealing ring is located on the top of the gearbox, neither water nor dirt can collect. We recommend the use of a protection cover (optional).

6.8 Mounting an input or output element on the gearbox shaft

WARNING

Risk of burns caused by hot parts

Do not touch the gearbox without protection.

NOTICE

Damage to shaft sealing rings caused by solvent

Avoid contact of solvent or benzine with the shaft sealing rings.

NOTICE

Damage to shaft sealing rings caused by heating

Use thermal shields to protect shaft sealing rings from heating above 100 °C due to radiant heat.

NOTICE

Premature wear or material damage due to misalignment

Misalignment caused by excessive angular or axial misalignment of the shaft ends to be joined. Ensure precise alignment of the individual components.

NOTICE

Damage caused by improper handling

Bearings, housing, shaft and locking rings are damaged due to improper handling. Do not use impact or knocks to mount input and output elements onto the shaft.

Note

Deburr the parts of elements to be fitted in the area of the hole or keyways.

Recommendation: $0.2 \times 45^\circ$

Where couplings are to be fitted in a heated condition, observe the specific operating instructions for the coupling. Unless otherwise specified, apply the heat inductively using a torch or in a furnace.

Use the center holes in the shaft end faces.

Use a fitting device to fit the input or output elements.

Figure 6-1 Example of a fitting device

Observe the correct mounting arrangement to minimize stress on shafts and bearings due to lateral forces.

Figure 6-2 Mounting arrangement for low stress on shafts and bearings

Procedure

1. Use benzine or a solvent to remove the anti-corrosion protection from the shaft ends and flanges. Or remove the existing protective skin.
2. Fit the drive input and output elements to the shafts. Lock the elements.

You have now attached the input or output element.

6.9 Removing and installing the protection cover

Ex-version gearboxes

A damaged protection cover causes sparks. Replace damaged protection covers immediately.

Secure bolts ① with, e.g. Loctite 243 medium-strength adhesive.

The plastic cover is not Ex-compliant.

The protection cover of the hollow shaft is delivered ready-fitted to the gearbox flange. Dismantle the protection cover for installation of the output shaft.

The plastic protection cover of the hollow shaft is supplied loose as kit.

Figure 6-3 Protection cover for hollow shaft

Figure 6-4 Protective cover for hollow shaft for worm geared motor S

- | | | | |
|---|------------------|---|--------------------|
| ① | Screw | ③ | Flat gasket/O-ring |
| ② | Protection cover | ④ | Gearbox housing |

Procedure

Premounted protection cover

1. Loosen the screws ① and remove the protection cover ② together with the flat gasket or O-ring ③.
 2. Mount the output shaft.
 3. Use a suitable cleaning agent to clean the contact surface of the protection cover ② on the gearbox.
 4. Ensure that the flat seal or the O-ring ③ is correctly seated.
 5. Apply medium-strength adhesive, e.g. Loctite 243 to the screws ①.
 6. Screw on the protection cover ②.
 7. Protect all remaining bare areas with a suitable permanent anti-corrosive agent.
- You have now installed the protection cover for operation.

Protection cover (supplied loose)

When using the plastic protection cover for gearbox F49, break the cover into the correct shape first.

When using the plastic protection cover for other gearboxes, it is not necessary to bring the cover into the required shape; in this case, start with Point 2.

6.10 Mounting and removing the slip-on gearbox

* Preset breaking point

Figure 6-5 Preset breaking point for F49

1. F49: Break the cover at the preset breaking point, see diagram.
2. Mount the output shaft.
3. Use a suitable cleaning agent to clean the contact surface of the protection cover ② on the gearbox.
4. Ensure that the O-ring or flat seal ③ is correctly seated.
5. Screw on the protective cover ② with a tightening torque of 5-10 Nm.
6. Protect all remaining bare areas with a suitable permanent anti-corrosive agent.

You have now mounted the plastic protection cover for operation.

6.10 Mounting and removing the slip-on gearbox

6.10.1 General information on installing the shaft-mounted gearbox

NOTICE

Damage to shaft sealing rings caused by solvent

Avoid any contact of solvent or benzine with the shaft sealing rings.

NOTICE

Subjecting stress to the hollow shaft causes bearing failure

Skewing or stressing the hollow shaft increases the loading. This can cause bearing failure.

The hollow shaft must be flush with the machine shaft to avoid misalignment.

Do not subject the hollow shaft to axial and radial stress.

NOTICE

For shrink disks:

Lubricants in the area between the hollow shaft and machine shaft impair torque transmission

Keep the bore in the hollow shaft and the machine shaft completely grease-free.

Do not use impure solvents and soiled cleaning cloths.

Note

Coat the contact surfaces with the mounting paste supplied with the product or any suitable lubricant to prevent frictional corrosion.

Note

Observe the permissible concentricity tolerance of the cylindrical shaft extension of the machine shaft to the housing axle according to DIN 42955.

6.10.2 Hollow shaft with feather key

6.10.2.1 Mounting the hollow shaft with parallel key

* Not included in scope of supply

- | | |
|--------------------|------------------|
| ① Machine shaft | ⑥ Locking ring |
| ② Hollow shaft | ⑦ Parallel key |
| ③ Hexagon nut | ⑧ Mounting paste |
| ④ Threaded spindle | ⑨ Screw |
| ⑤ Disk | ⑩ Sealing cap |

Figure 6-6 Mounting the hollow shaft with parallel key

Instead of the nut and threaded spindle shown in the diagram, other types of equipment such as hydraulic lifting equipment may be used.

Procedure

1. Using benzine or a solvent, remove the anti-corrosion protection from the shaft ends and flanges.
2. Check the seats or edges of the hollow and machine shafts for any damage. Contact Technical Support if you notice any damage.
3. Apply the mounting paste provided ① to the machine shaft ⑧. Apply the paste uniformly. Carefully wipe away the rest at the shaft sealing ring of the gearbox.
4. Fit the gearbox using the disk ⑤, threaded spindle ④ and nut ③. Use the hollow shaft ② for support.

6.10 Mounting and removing the slip-on gearbox

5. Replace the nut ③ and the threaded spindle ④ with a screw ⑨. Tighten the bolts ⑨ to the specified torque.
6. Close the open hollow shaft end using a sealing cap ⑩.

You have now mounted the hollow shaft with parallel key.

Table 6-6 Tightening torque for the screw

Thread size	M5	M6	M8	M10	M12	M16	M20	M24	M30
Tightening torque in Nm	5	8	8	14	24	60	120	200	400

6.10.2.2 Removing the hollow shaft with parallel key

WARNING

Inadequately fastened gearboxes or geared motors can break loose

Before driving out the machine shaft, fasten an adequately dimensioned load suspension device to the gearbox.

Slightly pretension the pulling equipment so that the gearbox does not drop onto it when the insert shaft is released.

NOTICE

Subjecting stress to the hollow shaft causes bearing failure

Do not skew when withdrawing.

NOTICE

Excessive forces during removal

Excessive forces can occur when removing the hollow shaft via the housing.

Stresses in the hollow shaft can lead to bearing failure and damage to the gearbox housing.

Note

If frictional corrosion has occurred on the seat surfaces, use rust solvent to facilitate the removal of the gearbox. Allow the rust solvent to take effect.

Items ① to ⑤ are not included in the scope of supply.

- | | |
|------------------|---------------|
| ① Disk | ④ Hexagon nut |
| ② Threaded block | ⑤ Leadscrew |
| ③ Feather key | |

Figure 6-7 Removing the hollow shaft with parallel key

Procedure

1. Remove the axial locking element from the hollow shaft.
2. Drive out the machine shaft using the disk ①, threaded block ②, feather key ③, threaded spindle ⑤ and hexagon nuts ④.

You have now removed the hollow shaft with fitted key.

Design suggestion for threaded block and disk

6.10.3 Hollow shaft with shrink disk

6.10.3.1 Mounting the hollow shaft with shrink disk

- a Greased
- b Absolutely grease-free
- ① Machine shaft
- ② Hollow shaft
- ③ Bushing

Figure 6-8 Mounting the hollow shaft with shrink disk

Procedure

1. Using benzine or a solvent, remove the anti-corrosion protection from the shaft ends and flanges.
2. Check the seats or edges of the hollow and machine shafts for any damage. Contact Technical Support if you notice any damage.
3. Mount the gearbox with the shrink disk shaft onto the machine shaft. Carefully ensure the correct position and that the shrink disk seat completely covers the machine shaft.

You have mounted the hollow shaft with shrink disk.

6.10.3.2 Mounting the shrink disk
 WARNING
Risk of injury due to freely rotating parts

Fit a cover cap or protection cover.

NOTICE**Lubricants in the shrink disk seat impair torque transmission**

Keep the bore in the hollow shaft and the machine shaft completely grease-free.

Do not use impure solvents and soiled cleaning cloths.

NOTICE**Plastic deformation of the hollow shaft caused by tightening the tightening bolts**

Plastic deformation of the hollow shaft when tightening the tightening bolts before fitting the machine shaft.

First fit machine shaft. Then tighten the tightening bolts.

NOTICE**Avoid overloading the individual bolts**

Do not exceed the maximum tightening torque for the tightening bolt.

Frame sizes 19 - 69:

tighten clamping screws ⑥

Frame sizes 79 - 189:

it is important that the face surfaces of the outer ring ④ and the inner ring ⑤ are flush with one another. If they are not flush with one another when fitting, check the tolerance of the plug-in shaft.

6.10 Mounting and removing the slip-on gearbox

Note

The shrink disk, item ③, is delivered ready for installation.

Do not disassemble it before the 1st fitting.

Note

The machine shaft material must comply with the following criteria in order to safely and reliably transfer the forces and torque:

- Yield point $Re \geq 360 \text{ N/mm}^2$
 - Modulus of elasticity: approx. 206 kN/mm^2
 - No face end thread in the machine shaft because it would reduce the transferred torque
-

Note

The shrink-fitted disc connection fastens the hollow shaft axially on the machine shaft.

Note

Apply a thin layer of grease to the shrink disk seat on the hollow shaft.

Note

Coat with a suitable lubricant to prevent frictional corrosion of the contact surface on the customer's machine shaft in the vicinity of the bush.

Sizes 19 - 69

Sizes 79 - 189

Figure 6-9 Mounting the shrink disk

Procedure

1. Push the shrink disk ③ onto the hollow shaft ②.
 - 3-part shrink disk up to the end stop for frame sizes 19 - 69.
 - 2-part shrink disk flush with the shaft end for frame sizes 79 - 189.
2. Tighten the clamping bolts ⑥, initially by hand. Align the shrink disk ③ so that the clamping flanges are plane-parallel with one other.
3. Use the torque wrench to tighten each of the clamping screws ⑥ (not crosswise), repeating this procedure several times. Evenly tighten the clamping screws through 1/6 of a revolution. Comply with the tightening torque.
4. Attach the rubber cover or protection cover included in the scope of delivery, as in Chapter Removing and installing the protection cover (Page 54).

You have now installed the shrink disk.

Table 6-7 Tightening torque for the tightening bolt

Gearbox size	Thread size	Strength class	Tightening torque
			Nm
19, 29	M5	10.9	5
39, 49, 69	M6	10.9	12

6.10 Mounting and removing the slip-on gearbox

Gearbox size	Thread size	Strength class	Tightening torque
			Nm
79, 89	M8	12.9	35
109	M10	12.9	70
129	M10	12.9	70
149	M12	12.9	121
169, 189	M14	12.9	193

6.10.3.3 Pulling off the shrink disk

Procedure

1. Successively release the tightening bolts ⑥ one after the other through a ¼ turn each time using a wrench. Do not completely remove the bolts.
2. Pull the shrink disk off the hollow shaft.

Sizes 79 - 189:

If the outer ring does not come away from the inner ring, remove some of the tightening bolts and insert them into neighboring forcing threads.

Pull the shrink disk off the hollow shaft.

6.10.3.4 Cleaning and lubricating shrink disks

Soiled shrink disks must be cleaned and regreased prior to fitting.

Shrink disks that have been released need not be disassembled and regreased before being retensioned.

Procedure

1. Only grease the inner friction surfaces of the shrink disks. To do this, use a solid lubricant with a friction coefficient of $\mu = 0.04$.
2. Use a paste containing MoS₂ to grease the bolts, applying the paste to the thread and underneath the head.

Clean the shrink disk.

Table 6-8 Lubricants for shrink disks

Lubricant	Sold as	Manufacturer
Molykote 321 R (lubricant paint)	Spray	DOW Corning
Molykote spray (powder spray)		
Molykote G Rapid	Spray or paste	Klüber Lubrication
Molykombin UMFT 1	Spray	
Unimily P5	Powder	
Aemasol MO 19 P	Spray or paste	A. C. Matthes

6.10.4 SIMOLOC assembly system

6.10.4.1 General notes for the SIMOLOC assembly system

WARNING

Risk of injury due to freely rotating parts

Fit a cover cap or protection cover.

NOTICE

Damaged components impair the correct function of the gearbox

If any components are damaged, the correct function of the gearbox will no longer be ensured.

Do not install any damaged gearbox components.

NOTICE

Lubricant on the machine shaft ① impairs the torque transmission

Keep the bore in the tapered bushing ⑨ and the machine shaft ① completely grease-free.

Do not use impure solvents and soiled cleaning cloths.

NOTICE

Avoid overloading the individual bolts

Do not exceed the maximum tightening torque for the tightening bolts ④ und ⑩.

Note

The SIMOLOC assembly system secures the hollow shaft axially on the machine shaft.

Note

In the hollow shaft ⑥, oil the locating hole for the tapered bushing ⑨ and bronze bushing ② lightly with the provided oil.

Oil type of the provided oil: CLP VG 68 DIN 51517-3

Note

The thrust collar ⑤ must be placed at the correct position as in the delivered state.

Note

Before installing the SIMOLOC, mount the torque arms ⑦ on the gearbox.

6.10.4.2 Installing SIMOLOC

Figure 6-10 Installing SIMOLOC

Procedure

1. Attach the torque arm ⑦ to the gearbox, as shown in Torque arms for slip-on gearboxes (Page 70).
2. Remove the corrosion protection coating using white spirit or a solvent on:
 - The shaft ends of the machine shaft ①
 - The clamping ring ③
 - The bronze bushing ②.
3. Check the seats or edges of the hollow shaft ⑥ and the machine shaft ① for damage. Contact Technical Support if you notice any damage.
4. Place the clamping ring ③ on the bronze bushing ②.
5. Position the bronze bushing ② with the clamping ring ③ on the machine shaft ①. Observe the tightening torque of the tightening bolt ④ and the tolerance dimension to10.
6. Oil lightly the locating holes in the hollow shaft ⑥ for the tapered bushing ⑨ and bronze bushing ②. Remove any excessive oil using a clean cloth.
7. Push the gearbox with the installed torque arm ⑦ on the machine shaft ① against the clamping ring ③.
8. Tighten the torque arm ⑦ with the bolts ⑧ only gently because the gearbox must have clearance for the subsequent mounting.
9. Ensure that the thrust collar ⑤ is placed at the correct position.
If the thrust collar ⑤ is not placed at the correct position, bring the ring ⑤ into the correct position by tightening the tightening bolts ⑩ with turned tapered bushing ⑨.
10. Place the tapered bushing ⑨ on the machine shaft ①.
11. Use the torque wrench to turn each of the tightening bolts ⑩ equally (not crosswise), repeating this procedure several times. Observe the tightening torque of the tightening bolt ⑩.
12. Tighten the bolts ⑧ of the torque-arm fastening, as shown in Torque arms for slip-on gearboxes (Page 70).
13. Attach the rubber cover or protection cover ⑪ included in the scope of delivery, as shown in Removing and installing the protection cover (Page 54).

You have installed the SIMOLOC assembly system.

Table 6-9 Tolerance dimension, tightening bolt ④ tightening torque

Gearbox type	Size	Tolerance dimension to10	Thread size ④	Tightening torque
		mm	Strength class 10.9	Nm
F, B, C	29	0.6 ... 2.1	M6	15
F, B, K, C	39	0.7 ... 2.2		
F, B, K, C	49	0.8 ... 2.6		
F, K, C	69	0.7 ... 2.5	M8	35
F, K	79	1.4 ... 3.2		
F, K, C	89	1.5 ... 3.4		

6.10 Mounting and removing the slip-on gearbox

Table 6-10 Tightening bolt ⑩ tightening torque

Gearbox type	Size	Thread size ⑩	Tightening torque
		Strength class 12.9	Nm
F, B, C	29	M5	10
F, B, K, C	39		
F, B, K, C	49	M6	16
F, K, C	69		
F, K	79	M8	38
F, K, C	89		

6.10.4.3 Removing SIMOLOC

Procedure

1. Remove all bolts ⑩ completely.
2. Screw the bolts ⑩ into the threaded holes ⑫.
3. Use the torque wrench to turn each of the bolts ⑩ equally (not crosswise), repeating this procedure several times. Observe the tightening torque of the bolt ⑩. Repeat the task until the tapered bushing ⑨ has been freed.
4. Unscrew the bolts ⑩ and remove the tapered bushing ⑨.
5. Lower the gearbox from the machine shaft ①.

You have removed the SIMOLOC assembly system.

6.10.5 Hollow shaft with splines

* Not included in scope of supply

- ① Machine shaft
- ② Hollow shaft
- ③ Hexagon nut
- ④ Threaded spindle
- ⑤ Disk
- ⑥ Locking ring
- ⑦ Mounting paste

Figure 6-11 Mounting the hollow shaft with splines

Instead of the nut and threaded spindle shown in the diagram, other types of equipment such as hydraulic lifting equipment may be used.

Procedure

1. Using benzine or a solvent, remove the anti-corrosion protection from the shaft ends and flanges.
2. Check the seats or edges of the hollow and machine shafts for any damage. Contact Technical Support if you notice any damage.
3. Apply the mounting paste ⑦ to the machine shaft ①. Apply the paste uniformly.
4. Fit the gearbox using the disk ⑤, threaded spindle ④ and nut ③. Support is provided by the hollow shaft ②.
5. Replace the nut ③ and the threaded spindle ④ with a screw. Tighten the bolts to the specified torque.

You have mounted the hollow shaft with splined shaft.

Table 6-11 Tightening torque for the screw

Thread size	M5	M6	M8	M10	M12	M16	M20	M24	M30
Tightening torque in Nm	5	8	8	14	24	60	120	200	400

6.10.6 Torque arms for slip-on gearboxes

6.10.6.1 General information regarding torque arms

Torque arms can absorb the reaction torque and the weight force of the gearbox.

Ex-version gearboxes

Worn or irreparably damaged rubber elements will not function properly.

Impact causes sparks

Immediately replace any damaged rubber elements.

NOTICE

Dangerous transient torques due to excess backlash

Take care to prevent the torque arm causing excessive constraining forces, e.g. due to the driven shaft running out-of-true.

NOTICE

Impermissible gearbox loading caused by incorrect mounting

Do not tension torque arms when mounting.

The torque arm bush must be supported by bearings on both sides.

NOTICE

Damage to the rubber elements caused by solvent

Solvents, oils, greases, and fuels damage rubber elements.

Prevent contact.

6.10.6.2 Mounting torque arms on parallel shaft gearboxes

We recommend using pretensioned, damping rubber elements.

Fixing accessories such as brackets, bolts, nuts, etc., are not included in the scope of supply.

Figure 6-12 Installation suggestion for torque arms on F.29 - F.189

Size	Rubber buffer				Washer	
	Unten- sioned	Tensioned				
	l1	l1x	d6	d1	d5	c6 _{min}
	mm	mm	mm	mm	mm	mm
29	15	14.0	30	10.5	40	4
39		13.5				
49	20	18.5	40	12.5	45	6
69		18.5			50	
79		17.5				
89	30	28	60	21	75	8
109		27.5				
129	40	37.5	80	25	100	10
149		36.5				
169	50	47.5	120	31	140	12
189		46.5				

Procedure

1. Use the washers according to the table above.
 2. Use two nuts to secure the screw connection (lock nuts).
 3. Tighten the bolts until the rubber buffers are pretensioned to the dimension l1x.
- You have now installed the torque arm.

6.10.6.3 Mounting torque arms on bevel gearboxes and helical worm gearboxes

NOTICE

Impermissible loading caused by incorrect mounting

The torque arm bush must be supported by bearings on both sides.

After assembly, the sleeve must have some axial play.

Figure 6-13 Mounting suggestion for torque arm on foot and flange

6.10 Mounting and removing the slip-on gearbox

The torque arm can be fitted in various positions, depending on the hole circle pitch.

Figure 6-14 Toggle lever design

For a toggle lever design, derive the force in the range of $90^\circ \pm 20^\circ$.

Procedure

1. Clean the contact surfaces between the housing and the torque arm.
 2. Tighten the bolts to the specified torque.
- You have now mounted the torque arm.

Table 6-12 Tightening torque for screws of strength class 8.8

Thread size	M8	M10	M12	M16	M20	M24	M36
Tightening torque in Nm	25	50	90	210	450	750	2 600

6.10.6.4 Attaching the torque arm to worm geared motor S

Figure 6-15 Attaching the torque arm

The torque arm can be mounted in various positions, depending on the hole circle pitch.

Figure 6-16 Toggle lever design

For a toggle lever design, derive the force in the range of $90^\circ \pm 20^\circ$.

Procedure

1. Clean the contact surfaces between the housing and the torque arm.
2. Tighten the M6 screws to 10 Nm torque.

You have now mounted the torque arm.

Commissioning

7.1 General information about commissioning

WARNING

Unintentional starting of the drive unit

Secure the drive unit to prevent it from being started up unintentionally.

Attach a warning notice to the start switch.

WARNING

Risk of slipping on oil

Remove any oil spillage immediately with an oil-binding agent in compliance with environmental requirements.

Checking the pressure breather valve

Check that the breather valve is activated.

If the breather valve has a transport fixture, it must be removed before commissioning.

Figure 7-1 Pressure breather valve with securing clip

Remove the transport fixture by pulling the securing clip ① in the direction of the arrow.

7.2 Checking the oil level prior to commissioning

Check the oil level before commissioning. If necessary, correct the oil level.

Siemens recommends a complete oil change after a storage time longer than 24 months:

- For gearboxes with long-term preservation.
- For gearboxes supplied completely filled with oil.

Follow Checking and changing lubricants (Page 94).

Gearbox in special mounting position

The gearbox is intended for a specific rotation angle and is delivered with the correct quantity of oil for this purpose.

It is not possible to check the oil level. You will find information regarding oil quantity and type of oil on the rating plate.

7.3 Mount the oil expansion unit

An oil expansion unit can be used depending on the power, drive speed, mounting position and transmission ratio. The oil expansion unit is used to equalize changes in the oil volume caused by temperature fluctuations in operation.

Before commissioning the gearbox, replace the screw plug with the oil expansion unit.

Oil expansion unit size 39 - 89

The unit is supplied as a mounting kit, and can be attached to the geared motor vertically or at an angle.

Figure 7-2 Installing oil expansion unit size 39 - 89

Procedure

1. Assemble the mounting kit ① - ⑤.
2. Screw on the unit with the screwed connection ⑤ at the uppermost drill hole of the gearbox housing or of the motor bearing shield.
3. Align the oil expansion unit so that it is vertical. Aligning it at an angle of $\pm 45^\circ$ to the vertical is permissible if space is restricted.

Oil expansion unit size 109 - 189**NOTICE****Hose with leaks**

The hose of the oil expansion unit is subject to a natural aging process.

Check the hose for tears or leaks.

Never commission a leaky hose. Replace the hose, if necessary.

The hose of the oil expansion unit is not suitable for ambient temperatures below -25 °C.

If the ambient temperatures differ, contact Technical Support.

The unit is supplied as a mounting kit. The installation is described in the supplied Compact Installation Instructions KA 2530-1.

Figure 7-3 Example of an oil expansion unit size 109-189

7.4 Electrical oil level check (optional)

7.4.1 General information

The oil level is optionally checked by the oil level sensor when the gearbox is not running. An optional electrical oil level control during operation can lead to incorrect information.

The oil level sensor is screwed in instead of the oil check screw and is premounted at the factory. The position of the oil check screw can be found in Chapter Mounting positions (Page 137).

7.4.2 Mounting the oil level control

Standard

Ex

7.4 Electrical oil level check (optional)

- ① Oil level
- 10 Reduction G3/8" or G3/4"
- 20 Encoder IMP CJ1-12GK-N for hazardous areas
- 30 Encoder IMP CBB4-12GH70-E2 for non-hazardous areas
- 40 Hexagon nut M12x1

Figure 7-4 Mounting the sensor for oil level control

Procedure before commissioning or after oil change with sensor installed in the factory

Before commissioning the gearbox, check the functionality of the capacitive oil level monitoring system.

Function test:

1. Connect capacitive sensor.
2. Drain oil at the oil drain plug or oil drain valve until the capacitive sensor outputs a switching signal which indicates "Fault". Collect the drained oil in the process.
3. Stop draining the oil and fill the collected oil back into the gearbox.
4. The "Fault" must be eliminated after refilling. The oil level is correct.

You have mounted the capacitive sensor.

**CAUTION****Functional restriction of the sensor**

Carefully comply with the following:

- Do not damage the cables or the insulation.
- Lay the supply line with strain relief.
- Avoid strong bending loads, buckling and point mechanical loads.

Connection

Non-hazardous area

Hazardous area

**Ex-version gearboxes**

Only use the oil level sensor for hazardous areas in combination with the disconnect.

The disconnect must be approved for the Ex-version.

Install the disconnect outside the hazardous area.

Comply with the operating instructions of the disconnect.

7.5 Electrical oil temperature monitoring (optional)

7.5.1 General information

The oil temperature is optionally monitored by the Pt100 resistance thermometer.

The oil temperature monitor is positioned in the area of the gearbox oil sump. The sensor pocket (item 1476) of the thermometer is screwed into the gearbox at the factory and closed with a sealing cap. Final assembly is carried out by the operator.

Technical specifications of the sensor

- Explosion protection type: II 2G Ex ia IIC Gb, II 2D Ex ia IIIC Db
- Protection class IP68
- 3-wire input
- Supply line of the sensor: S3x22/7-PTFE/PTFE, 0.36 mm², 2000 mm long, WH (RD/RD/WH), external diameter 3.8 mm, free ends
- Sensor ambient temperature: -40° C to +180° C
- Sensor pocket ambient temperature: -40° C to +125° C

**CAUTION****Permissible temperature limit**

The thermal limit temperature is 90° C oil sump temperature. This ensures a sufficient safety distance from the maximum permissible surface temperature.

7.5.2 Mounting the oil temperature monitor

The cable gland ②, ③, ④ is threaded onto the sensor cable ⑤.

Figure 7-5 Mounting the sensor for oil temperature monitoring

1475	Resistance thermometer consisting of ①, ②, ③, ④, ⑤	②	Intermediate connectors
1476	Sensor pocket	③	Sealing element
1477	Sealing cap	④	Screw-down nut
①	Sensor	⑤	Sensor cable

Procedure

1. Remove the sealing cap 1477 from the sensor pocket 1476.
2. Unscrew the cable gland ②, ③, ④ on the sensor cable ⑤.
3. Carefully insert the sensor ① completely into the sensor pocket 1476 until it reaches the bottom of the bore hole.

4. Screw the intermediate socket ② into the bore hole of the sensor pocket 1476 with AF11 and 4 Nm tightening torque.
5. Insert the sealing element ③ into the intermediate socket ②.
6. Tighten the screw-down nut ④ with AF11 and 4 Nm tightening torque.

You have mounted the sensor for oil temperature monitoring.

CAUTION

Functional restriction of the sensor

Carefully comply with the following:

- Threads, bore holes and sensor ① must be free of any dirt and residues.
- The sensor cable ⑤ must not rotate when the screw-down nut ④ is tightened.
- The sensor ① must be inserted completely, approx. 29 mm, in the sensor pocket 1476.
- Do not damage the cables or the insulation.
- Lay the supply line with strain relief.
- Avoid strong bending loads, buckling and point mechanical loads.

Ex-version of gearbox and geared motor

Comply with DIN EN 60079-14 when mounting and installing the sensor.

Circuitry of the connections according to EN 60751.

Ex-version of gearbox and geared motor

Operate the Pt100 resistance thermometer with a disconnecter.

The disconnecter must be approved for the Ex-version.

The disconnecter is installed outside the hazardous area.

Comply with the operating instructions of the disconnecter.

7.6 Options of the VLplus heavy-duty bearing system

7.6.1 Automatic regreasing device

Gearboxes with the VLplus heavy-duty bearing system can be optionally supplied with an automatic regreasing system.

The automatic regreasing device can be mounted in any position and can be used underwater.

7.6 Options of the VLplus heavy-duty bearing system

- ① Lubrication time controller
- ② Pressure generator
- ③ H₂ gas
- ④ Pressure piston

- ⑤ Transparent housing
- ⑥ Rolling bearing grease
- ⑦ Unit floor
- ⑧ Connection thread

Figure 7-6 Automatic regreasing device

Table 7-1 Technical data

Grease fill quantity	125 ml
Adjustable lubrication duration	0 ... 12 months
Permissible ambient temperature	-20° C ... +55° C
Max. operating pressure	3 bar
Pressure generator	Hydrogen gas generating cell
Recommended storage temperature	+20° C
Usage period	Within 2 years of the filling date
Weight including grease fill	Approx. 190 g

⚠ CAUTION

Closed lubricator bursts

Overpressure will result if the lubricator is not opened and the grease channels are contaminated. At an overpressure of approximately 5 bar, the lubricator will burst at the preset breaking point between the housing and the funnel.

Open the lubricator before commissioning.

Press fresh grease into blocked channels with a grease gun.

Note

Fill the lubricant channels and bearings with grease before installing the lubricator.

Procedure

1. Clean the area around the connection thread of the greasing point.
2. Use a knife to cut off the seal at the lubricator outlet. Or remove the screw plug.

Figure 7-7 Sealing the lubricator

3. Screw the lubricator into the connection thread.
- You have mounted the automatic regreasing system.

Setting the lubrication time

CAUTION

Setting the wrong lubrication time

The lubrication time is heavily influenced by the resistance in the lubricant channels and the ambient temperature.

Check the actual lubrication time during operation.

The actual lubrication time is the time it takes for the lubricator to be completely emptied. The lubrication time is influenced by the resistance in the lubricant channels and the ambient temperature.

At an ambient temperature of -10°C , the actual lubrication time is twice that for the set temperature.

At an ambient temperature of $+40^{\circ}\text{C}$, the actual lubrication time drops to approximately half that for the set temperature.

Figure 7-8 Lubrication time controller

Procedure

1. Set the lubrication time using a 3 mm Allen key.
2. Note the date of commissioning and the lubrication time on the lubricator.

You have set the lubrication time controller.

The times in months listed in the table are guide values.

Table 7-2 Timing in months on the lubrication time controller

Size	89	109	129	149	169
Months	12	12	12	12	11

7.6.2 Dry-well version with oil sensor

Comply with the separate operating instructions for the oil level sensor.

The oil sensor can also be deployed for Ex-version gearboxes.

Ex-version gearboxes

The oil sensor operates with a disconnecter.

The disconnecter must be approved for the Ex-version.

The disconnecter is installed outside the hazardous area.

Comply with the operating instructions of the disconnecter.

CAUTION

Functional restriction of the sensor

Carefully comply with the following:

- The sensor must be free of any dirt and residues.
- Do not damage the cables or the insulation.
- Lay the supply line with strain relief.
- Avoid strong bending loads, buckling and point mechanical loads.

Ex-version of gearbox and geared motor

The difference between the temperature of the housing and the ambient temperature of max. +40° C must not exceed 70 K.

If the ambient temperatures differ, contact Technical Support.

Using a suitable temperature sensor, measure the temperature at the lowest point of the housing (oil sump) or at the mounting surface in the case of output units. We recommend that you monitor the gearbox temperature indirectly by monitoring the motor current.

Changes are an indication of possible incipient damage.

CAUTION

Malfunctions can cause injuries or gearbox damage

In the event of changes during operation, the drive unit must be switched off immediately.

Determine the cause of the fault using the fault table (Page 87). Remedy faults or have faults remedied.

Check the gearbox or the geared motor during operation for:

- Excessive operating temperature
- Smooth and vibration-free operation
- Changes in gear noise
- Possible oil leakage at the housing and shaft seals

Faults, causes and remedies

Note

Faults and malfunctions that occur during the warranty period and requiring repair work on the gearbox must be remedied only by Technical Support. If faults occur without a clearly identifiable cause after the warranty period has elapsed, Siemens recommends the services provided by Technical Support.

If you need the help from the Technical Support, please have the following information ready:

- Rating plate data
- Nature and extent of the fault
- Suspected cause

Table 9-1 Faults, causes and remedies

Faults	Causes	Remedy
Unusual noise on the gearbox.	Oil level too low.	Check the oil level (Page 94).
	Foreign bodies in the oil (irregular noise).	Checking the oil quality (Page 103). Cleaning the gearbox or geared motor (Page 115). Change the oil (Page 94).
	Excessive bearing play and / or bearing defective.	Check the bearings, possibly replace.
	Defective gearing.	Check the gearing, possibly replace.
	Fastening bolts loose.	Checking tightness of fastening bolts (Page 116).
	Excessive external load on the drive input and output.	Check the load against rated data (you might need to correct the belt tension, for example).
	Transport damage.	Check the gearbox for damage in transit.
	Damage due to blockage during commissioning.	Call Technical Support.
Unusual noise from the drive unit.	Drive unit bearing not lubricated (motor size 160 and higher).	Regrease bearing (Page 107).
	Excessive bearing play and / or bearing defective.	Check the bearings, possibly replace.
	Fastening bolts loose.	Checking tightness of fastening bolts (Page 116).
Unusual motor noise.	Excessive bearing play and / or bearing defective.	Check the bearings, possibly replace.
	Motor brake is rubbing.	Check the air gap, possibly readjust
	Inverter parameterization.	Correct the parameterization.

Faults	Causes	Remedy
Oil escapes.	Incorrect oil level for the mounting position being used.	Check the mounting position (Page 137) and the oil level (Page 94).
	Gearbox leaks.	Checking the gearbox for leaks (Page 114).
	Overpressure due to lack of venting.	Install the venting as appropriate for the mounting position (Page 137).
	Overpressure due to soiled venting.	Clean the venting (Page 114).
	Shaft sealing rings defective.	Replace the shaft sealing rings.
	Cover / flange bolts loose.	Checking tightness of fastening bolts (Page 116). Continue to monitor the gearbox.
	Surface sealing defective (e.g. on cover, flange).	Reseal.
	Damage in transit (e.g. hairline cracks).	Check the gearbox for damage in transit.
Oil leak at the gearbox vent	Incorrect oil level for the mounting position used and / or incorrect venting position.	Check the venting position, mounting position (Page 137) and the oil level (Page 94).
	Frequent cold starts during which the oil foams up.	Call Technical Support.
Gearbox overheats.	Motor fan cover and / or gearbox very dirty.	Clean the fan cover and surface of the geared motor (Page 115).
	Incorrect oil level for the mounting position being used.	Check the mounting position (Page 137) and the oil level (Page 94).
	Incorrect oil being used (e.g. incorrect viscosity).	Checking the oil quality (Page 103).
	Oil is too old.	Check the date of last oil change. Possibly change the oil (Page 94).
	Excessive bearing play and / or bearing defective.	Check the bearings, possibly replace.
	Coolant temperature outside the permissible range.	Adjust the cooling air to the right temperature
Output shaft does not turn when the motor is running.	Force flow interrupted by breakage in gearbox.	Call Technical Support.
Geared motor only starts with difficulty or not at all.	Incorrect oil level for the mounting position being used.	Check the mounting position (Page 137) and the oil level (Page 94).
	Incorrect oil being used (e.g. incorrect viscosity).	Checking the oil quality (Page 103).
	Excessive external load on the drive input and output.	Check the load against rated data (you might need to correct the belt tension, for example).
	Motor brake is not released.	Check the circuit / connection of the brake. Check brake for wear and readjust if necessary.
	Geared motor runs against backstop.	Change the direction of motor or backstop rotation.

Faults	Causes	Remedy
Excessive play at drive input and output.	Flexible elements worn (e.g. on couplings).	Replace flexible elements.
	Positive connection disrupted by overload.	Call Technical Support.
Speed and torque drop.	Belt tension too low (for belt drive).	Check the belt tension, possibly replace the belt.

Service and maintenance

10.1 General notes about maintenance work

Ex-version of gearbox and geared motor

All measures, checks, and their results must be documented by the operator and records kept in a safe place for 10 years.

WARNING

Unintentional starting of the drive unit

Secure the drive unit to prevent it from being started up unintentionally.

Attach a warning notice to the start switch.

NOTICE

Improper maintenance

Only authorized qualified personnel may perform the maintenance and servicing. Only install original parts supplied by Siemens.

Note

Worm gearbox S is lubricated for life.

Worm gearbox S does not require lubricant to be changed.

Only qualified personnel may perform the inspection, maintenance and servicing work. Comply with the information in Chapter Specific safety instructions (Page 27).

Table 10-1 Maintenance measures

Remedy	Interval	Description of work
Monitor and check the geared motor for unusual noise, vibrations, and changes.	Daily; if possible, more frequently during operation.	Operation (Page 85)
Check the housing temperature.	After 3 hours, on the first day, thereafter monthly.	
Check the bearings for bearing noise	Every 3 000 operating hours, or at least every 6 months.	
Check the oil level.	After the first day, and then every 3,000 operating hours, or at the latest after 6 months.	Checking and changing lubricants (Page 94)
Check the oil level sensor	Regularly and after oil changes.	Checking the oil level sensor (optional) (Page 115)

10.1 General notes about maintenance work

Remedy	Interval	Description of work
Check the oil quality.	Every 6 months.	Checking the oil quality (Page 103)
Change the oil.	Every 2 years or 10,000 operating hours ¹⁾ .	Checking and changing lubricants (Page 94)
Visual inspection of the gearbox and shaft sealing ring for leakage.	After the first day, thereafter monthly.	Checking the gearbox for leaks (Page 114)
Possibly replace the vent valve.	Once a year.	Replacing the vent valve (Page 114)
Cleaning the gearbox or geared motor.	Depending on degree of soiling, at least every 6 months.	Cleaning the gearbox or geared motor (Page 115)
Carry out a complete inspection of the geared motor.	Every 12 months.	Inspecting the gearbox (Page 116)
Check the friction clutch, possibly readjust.	After 500 hours, thereafter once a year and after every blockage.	Comply with the BA 2039 operating instructions.
Check the flexible claw coupling.	For the first time after 3 years, then annually.	Comply with the BA 2039 operating instructions.
Check that fastening bolts on gearboxes and add-on elements are securely tightened. Check that covers and plugs are securely fastened.	After 3 hours, and then every 2 years.	Checking tightness of fastening bolts (Page 116)
Change the rolling bearing grease.	When the oil is changed.	Change the roller bearing grease (Page 107)
Replace the bearing.	-	Replace bearings (Page 114)
Check the rubber buffer of the torque arms.	Every 6 months.	Torque arms for slip-on gearboxes (Page 70)
Check the hose of the oil expansion unit.	Check regularly, renew every 4 years at the latest.	Replacing the hose of the oil expansion unit (Page 117)
Lubricate the XLplus and VLplus heavy-duty bearing systems.	-	Lubrication of the XLplus and VLplus heavy-duty bearing systems (Page 112)
Check that the paint coating is undamaged.	Every 6 months	Surface treatment (Page 36)
Check that the ground connection is firmly connected.	Every 6 months	See SIMOTICS XP 1MB1 explosion-protected motors (https://support.industry.siemens.com/cs/ww/en/view/109757981) and SIMOTICS XP 1MB..5/6 explosion-protected motors (https://support.industry.siemens.com/cs/ww/en/view/109763259)

¹⁾ The intervals can be doubled when using synthetic oils. The data specified is valid for an oil temperature of +80° C. See the figure titled "Guide values for oil change intervals" for the intervals for other temperatures.

10.2 Parts subject to wear

Gear teeth

When carefully complying with dimensioning guidelines and maintenance intervals, after running-in, the gearing of the gearboxes and geared motors is almost wear-free. Worm gearing is an exception as a result of its inherent design. Depending on the operating conditions, the flanks of worm gear teeth can exhibit differing levels of wear, which is influenced by:

- Input speed
- Load level
- Operating temperature
- Lubricant
- Operating mode and switching frequency

Rolling bearings

Rolling bearings have a finite life even in ideal operating conditions.

The calculated nominal bearing life is 90 % of the achievable service life. The bearing life depends on the following:

- Input speed
- Bearing load level
- Operating temperature
- Lubricant and supply of lubricant to the rolling bearing
- Maintenance

Rolling bearings must be regularly checked. Comply with the information in Chapter General notes about maintenance work (Page 91).

Lubricants

Depending on the application conditions, lubricants have a limited service life as they are subject to natural aging. The oil service life especially depends on the oil sump temperature. Refer to Chapter Service life of the lubricants (Page 108) for guide values relating to oil change intervals. In the case of different operating conditions, contact Technical Support.

Shaft sealing rings

High quality radial shaft sealing rings are used to seal the oil space in the gearboxes. The shaft sealing rings prevent lubricant from escaping from the housing at the shaft outlet and prevent contaminants from entering the housing. The radial shaft sealing ring is provided with an additional protective lip to protect against contaminants from outside. The influencing factors are:

- Speed and peripheral velocity at the sealing lip
- Ambient conditions (temperature, dust, moisture, pressure, chemicals, radiation)
- Type of seal
- Seal material

10.3 Checking and changing lubricants

- Lubricant
- Surface quality of the sealing location
- Lubricant supply at the sealing location

Predicting the service life is not possible as a result of the various influencing factors, and depends on the application conditions. Radial shaft sealing rings must be regularly checked to ensure that they are leak-tight. Comply with the information in Chapter General notes about maintenance work (Page 91).

Cam ring / coupling ring

Gearboxes with adapter for mounting standard motors, in versions K2, K3, KQ, KS, K8, are equipped with torsionally flexible couplings to transmit force and dampen torsional oscillation. Shock and torsional oscillation are dampened by the annular gear between the coupling hubs. The service life of the annular gear depends on various factors:

- Operating conditions (operating temperature, chemicals)
- Application conditions (amount of shock, starting behavior, service factor)

Comply with the inspection intervals specified in Chapter General notes about maintenance work (Page 91).

10.3 Checking and changing lubricants

10.3.1 General safety notes

WARNING

Danger of scalding from the hot oil emerging from the unit

Before starting any work wait until the oil has cooled down to below +30 °C.

WARNING

Risk of slipping on oil

Remove any spilt oil immediately with an oil-binding agent in compliance with environmental requirements.

NOTICE

Damage to the gearbox caused by incorrect oil quantities

The oil quantity and the position of the sealing elements are determined by the mounting position.

After removing the oil level screw, the oil level may not be below the specified fill level.

NOTICE**Damage to the gearbox due to open oil holes**

Dirt and damaging atmosphere can penetrate through open oil holes.

Close the gearbox immediately after checking the oil level or changing the oil.

Note**Information about oil**

Refer to the rating plate for the type of oil, oil viscosity and quantity of oil required.

For oil compatibility, see Recommended lubricants (Page 109).

Note**Gearbox sizes 19 and 29**

Gearbox sizes 19 and 29 are lubricated for life. There is no opening to check the oil level. An oil change is not required.

In mounting positions M2 and M4 the gearboxes are equipped with a breather valve.

C29 has a breather valve in all mounting positions.

Note**Tandem gearbox - intermediate helical gearbox**

- In a horizontal operating position the bulging part of the housing of the intermediate helical gearbox generally faces vertically downwards.
 - The oil quantity is specified for every individual gearbox and is valid for the standard mounting position.
 - Perform the following work for each individual gearbox:
 - Check the oil level.
On the main gearbox D/Z, it is not possible to check the oil level in mounting position M4. The oil level is above the oil level bore so that the bearings above it are lubricated.
 - Check the oil quality.
 - Change the oil.
 - Fill in oil and top it up.
-

Note**Gearbox in special mounting position**

The gearbox is intended for a specific rotation angle and is delivered with the correct quantity of oil for this purpose.

It is not possible to check the oil level. You will find information regarding oil quantity and type of oil on the rating plate.

When draining the oil a higher residual quantity of oil may remain in the gearbox. When you carry out an oil change remove any residual oil.

10.3.2 Checking the oil level

NOTICE
The gearbox oil volume changes depending on the temperature

If the temperature rises, the volume increases. Where temperature differences and filling quantities are significant, the volume difference can amount to several liters.

The oil level must therefore be checked while still slightly warm, approximately 30 minutes after switching off the drive unit.

Figure 10-1 Oil level in the gearbox housing

Table 10-2 Minimum and maximum fill levels x

Oil level hole	Ød2	Fill level x	Tightening torque
	mm	mm	Nm
G 1/8"	14	2.5	10
G 1/4"	18	3	10
G 3/8"	22	4	25
G 3/4"	32	7	50

Procedure

1. Switch off the power supply to the drive unit.
2. Unscrew the oil level screw, see Mounting positions (Page 137). Oil escapes if the maximum fill level is above the plug hole.
3. Check the oil level. Observe the fill level x.
4. Top up the oil level if necessary and check it again.
5. Check the state of the sealing ring on the sealing element. If the sealing ring is damaged, replace the sealing element with a new one.
6. After checking, seal the gearbox immediately using the sealing element.

You have now checked the oil level in the gearbox housing.

10.3.3 Check the oil level for gearboxes with higher oil level in mounting position M4

Main gearboxes "a" DF, ZF, F., K. for tandem gearboxes do not have any check hole as shown in Figure 10-1.

The oil level for gearboxes with higher oil level in mounting position M4 can be checked as subsequently described.

Figure 10-2 Oil level check for tandem gearbox mounting position M4

Procedure

1. Switch off the power supply to the drive unit.
2. Remove the screw plug ③.
3. Make a mark ② on a suitable dipstick ①.
4. Insert the dipstick ① vertically into the opening until the mark ② is level with the screw plug seat ③.
5. Pull the dipstick ① out vertically.
6. Measure the distance "x" on the dipstick ①.
7. Compare the value "x" with the value for distance "x" as shown in the table.
8. Correct the oil level and check it again.
9. Check the condition of the sealing ring on screw plug ③ and replace the sealing ring if necessary.
10. Close and seal the gearbox using the screw plug ③.

You have checked the oil level of the tandem gearbox.

10.3 Checking and changing lubricants

① Dipstick

② Marking

10.3.4 Check the oil level for gearboxes with higher oil level in mounting position M6

The main gearboxes "a" F. for tandem gearboxes do not have any check hole.

The oil level for gearboxes with higher oil level in mounting position M6 can be checked as subsequently described.

- ① Dipstick / measuring instruments
- ② Starting point
- ③ Screw plug

Figure 10-4 Oil level check for tandem gearbox mounting position M6

Procedure

1. Switch off the power supply to the drive unit.
2. Remove the screw plug ③.
3. Guide the dipstick ① through the opening and place the dipstick on the hole.
4. Pull the dipstick ① out.
5. Measure the distance "x" on the dipstick ① from the starting point ②.
6. Compare the value "x" with the value for distance "x" as shown in the table.
7. Top up the oil level if necessary and check it again.
8. Check the condition of the sealing ring on the screw plug ③ and replace the sealing ring if necessary.
9. Seal the gearbox using the screw plug ③.

You have checked the oil level of the tandem gearbox.

- ① Dipstick / measuring instruments
② Starting point

Figure 10-5 Distance x for mounting position M6

Table 10-4 Values for distance "x"

Gearbox type	Distance "x" in mounting position M6	Oil hole position	
	mm		
FD / FDF 39	35 ₋₀	2	
FD / FDF 49	50 ₋₈	2	
FD / FDF 69	54 ₋₉	2	
FD / FDF 79	65 ₋₁₀	2	
FD / FDF 89	81 ₋₁₅	2	
FD / FDF 109	105 ₋₁₅	2	
FD / FDF 129	133 ₋₂₀	2	
FD / FDF 149	139 ₋₂₀	2	
FD / FDF 169	177 ₋₃₀	2	
FD / FDF 189	224 ₋₃₀	2	

10.3.5 Checking the oil level using the oil sight glass (optional)

If there is an oil sight glass to check the oil level ①, the oil must be visible in the center of the sight glass when the oil is cool. When the oil is hot, the oil level ① is above the center of the sight glass. The oil level ① of cold oil is below the center of the sight glass.

Figure 10-6 Oil level in the oil sight glass

Top up the oil level ① if necessary, and check it again.

10.3.6 Checking the oil level using the oil dipstick (optional)

In the M4 mounting position for ZF/EF helical gearboxes, the oil level can be checked with an oil dipstick.

Figure 10-7 Checking the oil level using the oil dipstick

To check the oil level, push the oil dipstick ① into the hole but do not screw it in.

The oil level must be between the lower ② and upper ③ marks on the oil dipstick ①.

After checking, screw the oil dipstick ① in again hand-tight. The oil dipstick ① can remain screwed in during operation.

Correct the oil level and check it again.

10.3.7 Checking the oil quality

Visible signs show effects on the oil. Fresh oil is clear to the eye, and has a typical smell and a specific product color. Clouding or a flocculent appearance indicates water and / or contamination. A dark or black color indicates residue, serious thermal decomposition or contamination.

Follow the symbols in the diagrams of the Mounting positions (Page 137).

Venting

Oil level

Procedure

1. Allow the geared motor to run for a short time. Wear and contaminant particles are visible in the oil shortly after shutting down.
2. Switch off the power supply to the drive unit.
3. Unscrew the sealing element at one of the points marked with the symbols listed above.
4. Remove some oil, using a suction pump and a flexible hose, for example.
5. Check the state of the sealing ring on the sealing element. If required, replace the sealing ring.
6. Seal the gearbox with the sealing element.
7. Check the oil for abnormalities. Change the oil immediately if you determine any abnormalities, as described in Changing the oil (Page 104).

You have now checked the oil quality.

10.3.8 Changing the oil

10.3.8.1 General safety notes for changing the oil

NOTICE

Impermissible mixing of oils leads to damage

Impermissible mixing of oils leads to:

- Darkening
- Sediment
- Foam formation
- Change of the viscosity or reduced corrosion protection
- Wear protection.

When changing oil of the same type, the residual volume of oil in the gearbox should be kept as low as possible. Generally speaking, a small residual volume will cause no particular problems.

Gear oils of different types and by different manufacturers must not be mixed. Have the manufacturer confirm that the new oil is compatible with the remaining volume of used oil.

If very different types of oil or oils with very different additives are changed, always flush out the gearbox with the new oil. When changing from mineral oil to polyglycol oil (PG) or vice versa, it is vital to flush the gearbox twice. All traces of old oil must be completely removed from the gearbox.

NOTICE

Contaminations of the oil impair the lubricity

Do not mix the gearbox oil with other substances.

Do not flush with paraffin or other solvents, as traces of these substances will always remain inside the gearbox.

Note

The oil must be warm because insufficient viscosity caused by oil that is too cold impairs correct emptying.

If necessary, run the gearbox for 15 to 30 minutes to become warm.

10.3.8.2 Draining the oil

Observe the symbols in the diagrams of the Mounting positions (Page 137):

Venting

Oil level

Oil drain

Procedure

1. Switch off the power supply to the drive unit.
 2. Unscrew the vent plug.
 3. Place a suitable and sufficiently large receptacle underneath the oil drain plug.
 4. Remove the oil drain plug. Drain all the oil into the receptacle.
 5. Check the state of the sealing ring on the sealing element. If the sealing ring is damaged, replace the sealing element with a new one.
 6. After draining the oil, seal the gearbox immediately using the sealing element.
- You have now drained the oil from the gearbox.

10.3.8.3 Flushing the gearbox when changing between incompatible oils**⚠ WARNING****Impermissible mixing of oils leads to damage**

Residual quantities of original oil can impair the specific properties of the new oil.

A flushing process is required with biodegradable and physiologically safe oils.

The residual corrosion protection oil must amount to no more than 1% of the operating oil volume.

Note

Polyglycol oil has a higher density than mineral oil. Therefore, it sinks down towards the oil drain and the mineral oil floats on top.

This makes the required complete draining of mineral oil from the gearbox extremely difficult.

Note

After the second flush, we recommend that an appropriate analysis institute checks the quality of the flushed fluid.

Observe the symbols in the diagrams of the Mounting positions (Page 137):

Venting

Oil drain

Procedure

1. After the oil has been drained, wipe the gearbox clean of any remaining mineral oil using a cloth.
2. Unscrew the vent plug.

10.3 Checking and changing lubricants

3. Fill the gearbox with a flushing oil, using a filter (filter mesh max. 25 µm). For the flushing oil, use either the new oil or one that is compatible with the new oil and is less expensive.
4. Operate the gearbox for 15 to 30 minutes under a low load.
5. Place a suitable and sufficiently large receptacle underneath the oil drain plug.
6. Remove the oil drain plug. Drain all the oil into the receptacle.
7. After flushing, immediately seal the gearbox using the sealing element.
8. Repeat this step for the second flushing.

You have now flushed the gearbox twice and can pour in the new oil.

10.3.8.4 Filling in oil

NOTICE

Mixing of different oils impairs the lubricity

When adding oil, use the same oil type and viscosity. If changing mutually incompatible oils, see Flushing the gearbox (Page 105).

Observe the symbols in the diagrams of the Mounting positions (Page 137):

Venting

Procedure

1. Unscrew the vent plug.
2. Fill the gearbox with fresh oil. Use a filler filter with mesh of max. 25 µm.
3. Check the oil level.
4. Correct the oil level if necessary and check it again.
5. Check the state of the sealing ring on the sealing element. If the sealing ring is damaged, replace the sealing element with a new one.
6. After filling with oil, seal the gearbox immediately using the sealing element.

You have now filled up the gearbox with oil.

10.3.9 Topping up with oil

If the mounting position of the gearbox is changed or oil lost because of leakage, check the oil level. If you notice oil escaping, locate the leak, and seal the affected area. Top up and check the oil level.

At the time of going to print, the following types of oil are being used when the gearbox is filled for the first time:

CLP ISO VG220: Fuchs Renolin CLP220

CLP ISO PG VG220: Fuchs Renolin PG220

CLP ISO PG VG460: Fuchs Renolin PG460

CLP ISO PAO VG68: Fuchs Renolin Unisyn XT68

CLP ISO PAO VG220: Fuchs Renolin Unisyn XT220

CLP ISO PAO VG460: Fuchs Renolin Unisyn CLP460

CLP ISO E VG220: Fuchs Plantogear S220

CLP ISO H1 VG100: Klüber Klübersynth UH1 6 100

CLP ISO H1 VG460: Castrol Optileb GT 1800/460

If, following agreement, the gearbox is filled at the factory with special lubricant for the special applications referred to above, the lubricant must be shown on the rating plate.

10.3.10 Change the roller bearing grease

The roller bearings are lubricated in the factory with the greases listed in the table.

Renew the grease quantify for grease-lubricated bearings with each oil change.

Clean the bearing before filling the bearing with fresh lubricant.

In the case of bearings on the output shaft or intermediate shafts, the grease quantity must fill 2/3, and in the case of bearings on the input side, 1/3 of the space between the rolling elements.

Table 10-5 Roller-bearing and shaft-sealing-ring grease

Fields of application	Ambient temperature	Manufacturer	Type
Standard	-40 °C to +80 °C	Klüber Fuchs	Petamo GHY 133 N Renolit CX-Tom 15 ¹⁾
Foodstuff-compatible for the food industry	-30 °C to +60 °C	Bremer & Leguil	Cassida Grease GTS 2
Biologically degradable, for agriculture, forestry and water industries	-35 °C to +60 °C	Fuchs	Plantogel 2 S
¹⁾ Rolling-bearing grease based on a semi-synthetic base oil.			

10.3.11 Service life of the lubricants

Note

In case of ambient conditions deviating from normal conditions, e.g. high ambient temperatures, high relative humidity, aggressive ambient media, the intervals between changes should be shorter. In such cases, contact Technical Support for assistance in determining the individual lubricant change interval.

Note

Oil sump temperatures above +80 °C can reduce service life. A temperature increase by 10 K halves the service life by the amount as shown in the figure titled "Guide values for oil change intervals".

For a +80 °C oil sump temperature, the following service life can be expected when observing the properties specified by Siemens:

Table 10-6 Service life of the oils

Type of oil	Service life
Mineral oil	10 000 operating hours or 2 years
Biodegradable oil	
Physiologically safe oil according to USDA-H1/-H2	
Synthetic oil	20 000 operating hours or 4 years

① Mineral oil

② Synthetic oil

T Oil bath steady-state temperature in °C

I Oil change interval in operating hours in h

Figure 10-8 Guide values for oil change intervals

Grease service life of roller bearing greases

Roller bearings and the clearance in front are filled with sufficient grease.

Under approved operating conditions and ambient temperatures, no regreasing is required.

We recommend that the grease in the bearings is also renewed when the oil or shaft sealing rings are replaced.

10.3.12 Recommended lubricants

The released and recommended lubricants are listed in the table NT 7300 (<https://support.industry.siemens.com/cs/ww/en/view/109753864>).

 DANGER
Used lubricants only have conditional approval The used lubricants are not or only conditionally approved for use in the foodstuff or pharmaceutical industry. Use only lubricants with USDA (United States Department of Agriculture) H1 / H2 approval for deployment in the foodstuff or pharmaceutical industry.

NOTICE
Incorrect operating temperatures impair lubricity of the gearbox oil Operating temperatures outside the permitted range impair the lubricating property of the gearbox oil. Carefully comply with the permissible oil sump temperatures listed in the lubricant table. The oil used must be approved for use in the ambient temperature range given on the rating plate. When changing the oil, comply with the operating temperature range of the new oil as specified by the oil manufacturer.

Note

As standard, the lubricants and shaft seals are harmonized and coordinated with one another corresponding to the prevailing operating conditions.

Contact Technical Support for:

- Change of the operating conditions
- Change in oil grade
- Deployment of new shaft seals.

Note

The lubricants used are not at all or only conditionally biodegradable. If biologically degradable lubricants are required, use only gearbox lubricants with the appropriate classification listed in the NT 7300 table.

10.3 Checking and changing lubricants

Note

SIEMENS recommends the use of CLP ISO PG oils for gearboxes of sizes 169 and 189 with a service factor $f_b < 1.2$.

Note

These recommendations are not a guarantee of the lubricant quality provided by your supplier. All lubricant manufacturers are responsible for the quality of their own products.

The oil viscosity is decisive for the oil selection (ISO VG class). The viscosity is specified on the rating plate of the gearbox. The viscosity class indicated applies for the contractually agreed operating conditions.

In the case of different operating conditions, contact Technical Support.

If, following agreement, the gearbox is filled at the factory with special lubricant for the special applications referred to above, the lubricant is shown on the rating plate.

The oil quality must meet the gearbox lubricant requirements specified in the NT 7300 table. The SIEMENS warranty is otherwise null and void. We recommend the use of one of these gearbox lubricants. These gearbox oils are subject to constant testing and meet the specified requirements. The recommended oils are possibly removed or replaced by oils that have been further developed at a later point in time. Regularly check that the selected lubricating oil is still recommended by SIEMENS. Otherwise change the product.

1) To ensure optimum lubricating properties, we recommend that the drive is preheated to an operating temperature of at least -30 °C. CLP = mineral oil CLP PG = polyglycol oil E = ester oil, organic oil (bio oil / risk of water pollution, class WGK1) PAO = poly-alpha-olefin oil CLP H1 = physiologically safe oil (USDA-H1 approval)						

10.4 Lubrication of the XLplus and VLplus heavy-duty bearing systems

The output-side bearing is greased depending on the frame size. Initial greasing has already been carried out.

In normal operating conditions and with low loads, the lubrication is sufficient for approximately 25,000 to 30,000 operating hours.

For higher loads due to speed and / or temperature, schedule regreasing at shorter intervals.

Regreasing intervals

Note

The relubrication interval of the bearing depends on the temperature and the load

For temperatures above +70° C, the regreasing interval must be reduced by half for each temperature increase of 15 K.

For moderate shock loading and vibration, the regreasing interval must be reduced by 20%.

For heavy loading, the regreasing interval must be reduced by half.

The regreasing interval is valid for a temperature of +70° C, measured on the surface of the housing in the vicinity of the bearing.

Regrease the bearing after the following number of operating hours.

Table 10-8 Regreasing interval in operating hours [h]

Output speed n_2	Operating hours for size				
	89	109	129	149	169
rpm	h				
≤ 30	29000	29000	29000	29000	18000
31 ... 50	29000	18000	18000	14000	14000
51 ... 100	14000	12000	12000	10000	9000
101 ... 150	10000	10000	9000	9000	7000
151 ... 250	9000	7000	7000	5000	5000
251 ... 400	7000	5000	5000	4000	4000

Rolling bearing grease

NOTICE

Impermissible mixing of rolling bearing greases results in damage

Residual quantities of original oil can impair the specific properties of the new oil.

When regreasing, do not mix greases with a different soap base.

Use the recommended rolling bearing grease when relubricating the bearings.

Using a grease gun, inject the grease into the bearing point via the lubricating nipples provided.

10.4 Lubrication of the XLplus and VLplus heavy-duty bearing systems

The grease quantities listed in the table are guide values.

Table 10-9 Grease quantity [g] for relubrication

Regreasing interval	Grease quantity for size				
	89	109	129	149	169
	g				
After 6 months	10	10	20	20	30
After several years without operation	28	33	46	68	95

Maintenance of the output-side bearing

Note

Change the grease filling of the rolling bearing when you change the gear oil.

Use the recommended rolling bearing grease when filling the bearings with new grease.

Procedure

1. Dismantle the output-side bearing unit.
2. Clean the bearing.
3. Fill the bearing with the new grease up to approximately 30% of the free bearing chamber.
4. Reassemble the bearing unit.

You have relubricated the bearing unit.

Maintenance interval after regreasing

After regreasing, the maintenance interval can be increased to the following number of operating hours.

Table 10-10 Maintenance interval in operating hours [h] for relubrication

Output speed n_2	Operating hours for size				
	89	109	129	149	169
rpm	h				
≤ 30	80000	80000	80000	80000	50000
31 ... 50	80000	50000	50000	40000	40000
51 ... 100	40000	32000	32000	28000	25000
101 ... 150	28000	28000	25000	25000	20000
151 ... 250	25000	20000	20000	15000	15000
251 ... 400	20000	15000	15000	10000	10000

10.5 Replace bearings

The bearing service life is finite, greatly depends on the operating conditions and therefore cannot be calculated reliably. In the operating conditions specified by the operator, bearing life can be calculated. Changes in vibration and noise pattern are an indication that an immediate bearing replacement is necessary.

10.6 Checking the gearbox for leaks

Note

Service life of the shaft sealing rings

Shaft sealing rings are subject to natural wear. The service life depends on the operating conditions.

Include the shaft sealing rings in periodic maintenance and service work carried out on the system.

Note

From the inherent principle of operation, oil mist can escape from the vent valve or a labyrinth seal.

Oil or grease escaping in small quantities from the shaft sealing ring should be regarded as normal during the running-in phase of 24 hours operating time.

Avoid consequential damage: If the leakage quantities are significant or leaking continues after the running-in phase, then replace the shaft sealing ring.

Table 10-11 Description and measures

Status	Description	Measures	Notes
Film of moisture on the shaft sealing ring	Film of moisture as a result of the inherent principle of operation (apparent leakage)	Remove using a clean cloth and continue to observe.	This does not represent a fault; frequently, in the course of operation, the sealing ring dries off.
Leakage at the shaft sealing ring	Identifiable small trickle, formation of drops, also after the running-in phase	Replace the sealing ring, determine the possible cause of the sealing ring failure and rectify.	During the run-in period, the shaft sealing ring beds into the shaft. A visible track can be seen on the shaft. Optimum preconditions for a perfect seal are obtained after the run-in period.

10.7 Replacing the vent valve

To ensure correct functioning, renew the breather valve yearly.

When replacing, prevent dirt and damaging atmospheres from entering the gearbox.

If too much oil is contained in the gearbox, oil will escape from the breather valve. Correct the oil quantity and replace the breather valve.

10.8 Checking the oil level sensor (optional)

The oil level sensor indicates the oil level only when the gearbox is shut down.

Lower the oil level and fill it up again until the oil level sensor gives a switching signal.

Please refer to the separate operating instructions for the oil level sensor.

10.9 Cleaning the gearbox or geared motor

Ex-version of gearbox and geared motor

When cleaning the gearbox, do not use any processes or materials that generate an electrostatic charging on the surface of the gearbox.

To avoid electrostatic charging, clean the surface of the geared motors using a damp cloth.

WARNING

Explosion hazard due to overheating of the machine caused by a layer of dust

Deposits of dust have a thermally insulating effect, causing the machine to overheat. The maximum surface temperature of the machine is not adhered to. The dust is ignited as a result, causing an explosion. Death, serious injury and material damage will result.

- Regularly remove dust from the machine.
- Do not allow dust layers thicker than 5 mm to build up.
- Switch the machine on when the dust has been removed.

NOTICE

Dust deposits cause higher housing temperatures

Dust deposits prevent heat radiation.

Keep the geared motor free from dirt and dust.

NOTICE

Cleaning with a high-pressure cleaning appliance

Water penetrates the geared motor. Seals are damaged.

Do not use a high-pressure cleaning appliance to clean the geared motor.

Do not use tools with sharp edges.

De-energize the drive unit and bring it into a no-voltage condition when cleaning the drive unit.

10.10 Checking tightness of fastening bolts

Ex-version of gearbox and geared motor

Loose parts can cause sparks through impact.

Entry of foreign bodies can cause sparks.

Note

Replace damaged headless bolts with new bolts of the same type and strength class.

Switch off the power supply to the drive unit. Check all fastening bolts for tightness using a torque wrench.

The general tolerance for the tightening torque is 10%. The tightening torque is based on a friction coefficient of $\mu = 0.14$.

Table 10-12 Tightening torques for fixing screws

Thread size	Tightening torque for property class		
	8.8	10.9	12.9
	Nm	Nm	Nm
M4	3	4	5
M5	6	9	10
M6	10	15	18
M8	25	35	41
M10	50	70	85
M12	90	120	145
M16	210	295	355
M20	450	580	690
M24	750	1 000	1 200
M30	1 500	2 000	2 400
M36	2 500	3 600	4 200

10.11 Inspecting the gearbox

Carry out a scheduled inspection of the gearbox once a year in accordance with the possible criteria listed in General notes about maintenance work (Page 91).

Check the gearbox in accordance with the criteria set out in Specific safety instructions (Page 27).

Touch up damaged paintwork carefully.

10.12 Replacing the hose of the oil expansion unit

NOTICE**Hose with leaks**

The hose of the oil expansion unit is subject to natural wear. The service life depends on the operating conditions.

Check the hose regularly for tears or leaks.

Renew the hose every 4 years at the latest.

Recycling and disposal of SIMOGEAR geared motors

For environmentally compliant recycling and disposal of your discarded device, please contact a company certified for the disposal of old electrical and electronic devices. Dispose of the device in accordance with the regulations valid in your country.

WARNING

Incorrect disposal of used oil

Incorrect disposal of used oil is a threat to the environment and health.

After use, oil must be taken to a used oil collection point. The addition of foreign substances such as solvents, brake and cooling fluid is prohibited.

Avoid prolonged contact with the skin.

Empty the used oil from the gearbox. The used oil must be collected, stored, transported and disposed of in accordance with regulations. Do not mix polyglycols with mineral oil. Dispose of polyglycols separately.

Strictly observe country-specific rules and regulations. Under German law, to allow optimal treatment of the oil (§ 4 VI Used Oil), oils with different disposal codes must not be mixed with one another.

Collect and dispose of used oil in accordance with regulations.

Immediately remove any spilt oil with an oil-binding agent.

Dispose of the housing parts, gears, shafts, and rolling bearings of the geared motor as scrap metal.

Dispose of packaging material in accordance with regulations.

Table 11-1 Disposal codes for gear oils

Oil grade	Designation	Disposal code
Mineral oil	CLP ISO VG220	13 02 05

12.2 Rating plate data

12.2.1 General technical data

 WARNING
Exceeding the power limits Exceeding the power limits (max. speeds, max. torque etc.) of the gearbox or motor can damage the geared motor. Maintain the permissible operating ranges and power limits of the motor and gearbox. The max. speeds and torque shown indicate the mechanical limits of the geared motor. Depending on the application, also take into account thermal limits. In applications with long max. speed components, high pressure build-up may occur in the gearbox, which can cause damage to the gearbox (e.g. leakage).

The most important technical data appears on the rating plate of the gearboxes and geared motors.

This data, together with the contractual agreements for the geared motors, determines the limits of intended use.

In the case of geared motors, a rating plate attached to the motor indicates the data for the entire drive.

In certain cases separate rating plates are attached to the gearbox and the motor. Maintain the operating ranges and power limits on all rating plates.

The degree of protection according to EN 60034-5 (IEC 60034-5) specified on the nameplates only applies to the motor of the unit.

When selecting higher degrees of protection, also take into consideration the equipping on the gearbox side (seals, vents).

12.3 Weight

The weight of the entire geared motor is given in the shipping papers.

The weight is stated on the rating plate of the motor, gearbox or geared motor.

The weight specification refers only to the product in the delivery state.

12.4 Sound energy level

SIMOGear geared motors have noise levels below the permissible noise levels defined for gearboxes in VDI guideline 2159 and for motors in IEC 60034-9. Interaction with gearboxes causes the motor noise values L_{pFA} or L_{WA} to increase on average by 3 to 5 dB (A).

The circumferential velocity of the motor pinion has a significant influence on the additional gearbox noise level. As a consequence, higher speeds or lower ratios result in higher noise.

SIMOGear geared motors provide a decisive advantage here, since the motor plug-on pinion allows transmission ratios of up to 12 in the input stage.

Code	Description	Unit
L_{pFA}	A-weighted enveloping surface sound pressure level	dB (A)
L_{WA}	Sound power level	dB (A)

External noise

Noise not generated by the gearbox but emitted from it are not taken into consideration.

Noise emitted by the drive and driven machines or the base are also not taken into consideration. Even when the noise from the gearbox have been transferred there.

12.5 Mounting positions

12.5.1 General notes on mounting positions

Only operate the gearbox in the mounting position specified on the rating plate. This ensures that the correct quantity of lubricant is provided.

The symbols are shown for the standard mounting position.

Note

Gearbox sizes 19 and 29

Gearbox sizes 19 and 29 are lubricated for life. There is no opening to check the oil level.

In mounting positions M2 and M4 the gearboxes have a breather valve.

C29 has a breather valve in all mounting positions.

Note

Worm gearbox or worm geared motor

Gearboxes are lubricated for life. There are no openings to check the oil level.

12.5.7 Worm gearbox

Note

Gearboxes are lubricated for life. There are no openings to check the oil level.

The lubrication for life has been designed to enable the gearbox to be operated in all the frame sizes and mounting positions shown.

M0 is a universal mounting position. The geared motor can be installed in all mounting positions.

M1

M2

M3

M4

M5

M6

Figure 12-47 Mounting positions for worm gearbox S, frame size 09 - 29

12.5.8 Tandem gearbox/gearbox with slow input speed - intermediate helical gearbox or drive unit

Only operate the gearbox in the mounting position specified on the rating plate. This ensures that the correct quantity of lubricant is provided. The symbols are shown for the standard mounting position.

Note

Horizontal operating position

In a horizontal operating position the bulging part of the housing of the intermediate helical gearbox generally faces vertically downwards.

Note**Helical gearbox size 19**

The helical gearbox size 19 is lubricated for life. There is no opening to check the oil level.

The gearboxes have a breather valve in vertical mounting positions.

Note**Tandem gearbox/gearbox with slow input speed**

Tandem gearbox (a - main gearbox) is representative for a gearbox with slow input speed.

In some mounting positions, a higher oil level is required in order to adequately lubricate the bearings at the top.

12.6 Oil quantities

NOTICE

Damage to the gearbox caused by incorrect oil quantities

The oil quantities listed in the tables are guide values for changing the oil. They serve, for example, for lubricant storage and procurement.

The precise values depend on the number of stages and transmission ratio of the gearbox.

The specified oil quantities are valid for the standard mounting position.

Note

Tandem gearbox - intermediate helical gearbox

The oil quantity is specified for every individual gearbox and is valid for the standard mounting position.

Note

Gearbox in special mounting position

The gearbox is intended for a specific rotation angle and is delivered with the correct quantity of oil for this purpose.

You will find information regarding oil quantity and type of oil on the rating plate.

12.6.5 Tandem gearbox/gearbox with slow input speed - intermediate helical gearbox or drive unit

12.6.5.1 Two- and three-stage helical gearboxes

Note

For gearbox "a" in mounting position M4, the oil level is above the oil level hole so that the higher bearings are lubricated.

12.6.5.3 Bevel gearbox

Note

For gearbox "a" in mounting position M4, the oil level is above the oil level hole so that the higher bearings are lubricated.

Spare parts

13.1 Stocking of spare parts

By stocking the most important spare and wearing parts on site, you can ensure that the gearbox or geared motor is ready for use at any time.

NOTICE
Safety impairment caused by inferior products The installation and / or use of inferior products has a negative impact on the design characteristics of the geared motor. As a consequence, active and / or passive safety is diminished. Siemens explicitly states that only spare parts and accessories supplied by Siemens have been tested and approved by Siemens. If you do not use original spare parts and original accessories, Siemens excludes any liability and warranty. Siemens accepts the warranty only for original spare parts.

Note that special manufacturing and delivery specifications often apply to individual components. All spare parts offered by Siemens are state-of-the-art and conform to the latest legal regulations.

Please state the following data when ordering spare parts:

- Serial number shown on the rating plate ③
- Type designation shown on the rating plate ⑥

For motors with their own rating plate, the spare parts documentation in the original operating instructions applies.

13.2 Spares on Web

Rapid support around the clock – SIMOGEAR Service

Service is your partner for comprehensive support and innovative services for increasing your productivity. The original parts and manufacturing expertise help you achieve maximum machine availability and productivity. The proven services therefore contribute to reducing the total cost of ownership for you, as well as to creating sustainable values and solutions.

The technical product lists are provided in Spares on Web (<https://www.sow.siemens.com/?lang=en>).

The screenshot shows the Siemens Spares on Web interface. At the top, there's a navigation bar with 'English', 'Help', and 'Contact'. Below that, there's a search bar with 'Single', 'Multi', and 'Shopping Cart' options. The main form has two input fields: 'Article No.' with the value '2KJ3102-1CE11-2AU1-Z' and 'Serial number' with the value 'FDUN1255255701'. There's also an 'Options' field with the text 'Options, e.g. A01+B02+C03'. A 'Search' button is at the bottom left, and a 'Show images' checkbox is at the bottom right.

① Article number

② Serial number

Figure 13-2 Enter a sample article and serial number in Spares on Web

Procedure

1. Open the spare parts list with the link provided.
2. In the field ①, enter the "Article No." stated on the rating plate or SIMOGEAR.
Example: 2KJ3102-1CE11-2AU-Z or SIMOGEAR
3. In the field ② "Serial number", enter the production number stated on the rating plate or only the abbreviated number.
Example: FDUN1/255255701 or 2552557
4. You can directly access the operating instructions via "Industry Online Support (SIOS)".
5. Use the "Search" function to display the spare parts list.
6. The installation positions of the listed spare parts can be determined based on the position numbers specified in column "BKZ" (equipment marking) and the spare part drawings in Chapter Spare parts lists (Page 189) .

You have opened the spare parts list through Spares on Web.

13.3 Spare parts lists

13.3.1 Helical gearbox E, sizes 39 - 149

Figure 13-3 Helical gearbox E, sizes 39 - 149

1001	Gearbox housing	1160	Shaft sealing ring
1040	Output flange	1210	Screw
1045	Screw	1212	Nut
1101	Output shaft	1225	Seal

13.3 Spare parts lists

1105	Feather key	1301	Shank pinion
1129	Supporting disk	1303	Shell pinion
1130	Bearing	1304	Feather key
1131	Shim	1305	Helical gear
1133	NILOS ring	1306	Feather key
1135	Locking ring	1308	Locking ring
1136	Locking ring	1309	Seal
1140	Bearing	1401	Screw plug
1144	Supporting ring / shim	1420	Vent filter
1145	Locking ring	1430	Lifting eyebolt

Helical gearbox D / Z, sizes 19 - 189

Note

For gearbox sizes 19 and 29, Siemens recommends replacement of the gearbox if service is required.

Parts subject to wear are available on request.

Name, Anschrift bevollmächtigte Person Innomotics GmbH
für technische Unterlagen: Xingjian Chen
Name, address of authorised person for Bahnhofstraße 40
technical file: DE-72072 Tübingen

Die alleinige Verantwortung für die Ausstellung dieser Einbauerklärung trägt der Hersteller.

This declaration of incorporation is issued under the sole responsibility of the manufacturer.

Der oben beschriebene Gegenstand der Erklärung erfüllt die einschlägigen Harmonisierungsrechtsvorschriften der Union:

The object of the declaration described above is in conformity with the relevant Union harmonisation legislation:

Maschinenrichtlinie:

2006/42/EG Richtlinie des Europäischen Parlaments und des Rates vom 17. Mai 2006 über Maschinen und zur Änderung der Richtlinie 95/16/EG

Machinery Directive:

2006/42/EC Directive of the European Parliament and of the Council of 17 May 2006 on machinery, and amending Directive 95/16/EC

Weitere Angaben über die Einhaltung dieser Richtlinie(n) enthält Anhang MR2, der ein integraler Bestandteil dieser Erklärung ist.

Further information about the conformity to this Directive(s) is given in Annex MR2, which is an integral part of this declaration.

Harmonisierte Normen / Harmonised standards:

Referenznummer <i>Reference number</i>	Ausgabedatum <i>Date of issue</i>	Referenznummer <i>Reference number</i>	Ausgabedatum <i>Date of issue</i>
EN ISO 12100	2010		

Diese Erklärung bescheinigt die Übereinstimmung mit den genannten Richtlinien, ist jedoch keine Beschaffenheits- oder Haltbarkeitsgarantie.
Die Sicherheitshinweise der mitgelieferten Produktdokumentation sind zu beachten.

*This declaration is an attestation of conformity with the indicated Directive(s) but does not imply any guarantee of quality or durability.
The safety instructions of the accompanying product documentation shall be observed.*

Einbauerklärung Declaration of incorporation

Nr. / No. A5E36963968AG

Das bezeichnete Produkt ist eine unvollständige Maschine im Sinne von Art. 2 g) der Richtlinie 2006/42/EG. Sie ist nur dazu bestimmt, in andere Maschinen oder in andere unvollständige Maschinen oder Ausrüstungen eingebaut oder mit ihnen zusammengefügt zu werden.

The designated product is a partly completed machinery in the sense of Art 2 g) of Directive 2006/42/EC. It is only intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment.

Die relevanten, angewendeten und eingehaltenen grundlegenden Anforderungen nach Anhang I der Richtlinie 2006/42/EG sind im Anhang MR2 zu dieser Erklärung aufgeführt.

The relevant, applied and fulfilled essential requirements of Annex I of Directive 2006/42/EC are listed in Annex MR2 of this declaration.

Die speziellen technischen Unterlagen nach Anhang VII, B der Richtlinie 2006/42/EG wurden erstellt und werden den Behörden auf begründete Anforderung in ☒ elektronischer / ☐ Papierform zur Verfügung gestellt.

The relevant technical documentation according to Annex VII, B of Directive 2006/42/EC has been compiled and will be provided to the authorities upon request in ☒ electronic / ☐ paper form.

Die unvollständige Maschine darf erst dann in Betrieb genommen werden, wenn gegebenenfalls festgestellt wurde, dass die Maschine, in die die unvollständige Maschine eingebaut werden soll, den Bestimmungen der Maschinenrichtlinie 2006/42/EG entspricht.

The partly completed machinery must not be put into service until the final machinery into which it is to be incorporated has been declared in conformity with the provisions of Directive 2006/42/EC, where appropriate.

Annex MR2 to the declaration of incorporation

Nr. / No. A5E36963968AG

Product identification: Gearbox with adapter 2KJ3...

The following essential health and safety requirements of Directive 2006/42/EG, Annex I are relevant for the identified uncompleted machinery. According to the remarks in column 3 they have been solved respectively bear residual hazards which have to be covered by the manufacturer of the final machinery. Risks, not being relevant for the uncompleted machinery are not listed.

2006/42/EC Annex I	Denotation	Requirement fulfilled	
		y/n	Additional remark
1	Essential health and safety requirements		
1.1.2	Principles of safety integration	y	
1.1.3	Materials and products	y	
1.1.5	Design of machinery to facilitate its handling	y	
1.3	Protection against mechanical hazards		
1.3.1	Risk of loss of stability	y	
1.3.2	Risk of break-up during operation	y	
1.3.3	Risks due to falling or ejected objects	y

Einbauerklärung Declaration of incorporation

Nr. / No. A5E36964102AM

Das bezeichnete Produkt ist eine unvollständige Maschine im Sinne von Art. 2 g) der Richtlinie 2006/42/EG. Sie ist nur dazu bestimmt, in andere Maschinen oder in andere unvollständige Maschinen oder Ausrüstungen eingebaut oder mit ihnen zusammengefügt zu werden.

The designated product is a partly completed machinery in the sense of Art 2 g) of Directive 2006/42/EC. It is only intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment.

Die relevanten, angewendeten und eingehaltenen grundlegenden Anforderungen nach Anhang I der Richtlinie 2006/42/EG sind im Anhang MR2 zu dieser Erklärung aufgeführt.

The relevant, applied and fulfilled essential requirements of Annex I of Directive 2006/42/EC are listed in Annex MR2 of this declaration.

Die speziellen technischen Unterlagen nach Anhang VII, B der Richtlinie 2006/42/EG wurden erstellt und werden den Behörden auf begründete Anforderung in ☒ elektronischer / ☐ Papierform zur Verfügung gestellt.

The relevant technical documentation according to Annex VII, B of Directive 2006/42/EC has been compiled and will be provided to the authorities upon request in ☒ electronic / ☐ paper form.

Die unvollständige Maschine darf erst dann in Betrieb genommen werden, wenn gegebenenfalls festgestellt wurde, dass die Maschine, in die die unvollständige Maschine eingebaut werden soll, den Bestimmungen der Maschinenrichtlinie 2006/42/EG entspricht.

The partly completed machinery must not be put into service until the final machinery into which it is to be incorporated has been declared in conformity with the provisions of Directive 2006/42/EC, where appropriate.

Annex MR2 to the declaration of incorporation

No. A5E36964102AM

Product identification: Geared motor 2KJ3...

The following essential health and safety requirements of Directive 2006/42/EG, Annex I are relevant for the identified uncompleted machinery. According to the remarks in column 3 they have been solved respectively bear residual hazards which have to be covered by the manufacturer of the final machinery. Risks, not being relevant for the uncompleted machinery are not listed.

2006/42/EC Annex I	Denotation	Requirement fulfilled	
		y/n	Additional remark
1	Essential health and safety requirements		
1.1.2	Principles of safety integration	y

Verordnung (EU) Nr. 2019/1781*:

Verordnung der Kommission vom 1. Oktober 2019 zur Festlegung von Ökodesign-Anforderungen an Elektromotoren und Drehzahlregelungen gemäß der Richtlinie 2009/125/EG des Europäischen Parlaments und des Rates; Amtsblatt der EU L272, 25/10/2019, S. 74–94

Weitere Angaben über die Einhaltung dieser Richtlinie(n) enthalten Anhang MR1 und MR2, die ein integraler Bestandteil dieser Erklärung sind.

Regulation (EU) No. 2019/1781*:

Commission Regulation of 1 October 2019 laying down ecodesign requirements for electric motors and variable speed drives pursuant to Directive 2009/125/EC of the European Parliament and of the Council; Official Journal of the EU L272, 25/10/2019, p. 74–94

Further information about the conformity to this Directive(s) is given in Annex MR1 and MR2 which are integral parts of this declaration.

* - Die Verordnung (EU) Nr. 2019/1781 wird nur für die Produkte erklärt, welche in deren Anwendungsbereich fallen. Erfasst sind Motoren, die gemäß den Angaben auf dem jeweiligen Typenschild für den Betrieb mit einer Frequenz von 50Hz, 60Hz, 50/60Hz, mit einer Nennspannung UN von mehr als 50 V und bis zu 1000 V sowie einer Nennausgangsleistung PN von 0,12 kW bis einschließlich 1000 kW in der Betriebsart Dauerbetrieb ausgelegt sind sowie zwei, vier, sechs oder acht Pole aufweisen und nicht vollständig geschlossen unbelüftet (TENV) sind.

* - Regulation (EU) No. 2019/1781 is declared only for the products that fall within its scope. Covered are motors that, according to the information on the respective nameplate, are designed to operate at a frequency of 50Hz, 60Hz, 50/60Hz, with a nominal voltage UN of more than 50 V and up to 1000 V and a nominal output power PN of 0.12 kW up to and including 1000 kW in the continuous operation mode and have two, four, six or eight poles and are not totally enclosed non-ventilated (TENV).

Diese Erklärung bescheinigt die Übereinstimmung mit den genannten Richtlinien, ist jedoch keine Beschaffenhheits- oder Haltbarkeitsgarantie. Die Sicherheitshinweise der mitgelieferten Produktdokumentation sind zu beachten.

This declaration is an attestation of conformity with the indicated Directive(s) but does not imply any guarantee of quality or durability. The safety instructions of the accompanying product documentation shall be observed.

Einbauerklärung Declaration of incorporation

Nr. / No. A5E51443210AC

Das bezeichnete Produkt ist eine unvollständige Maschine im Sinne von Art. 2 g) der Richtlinie 2006/42/EG. Sie ist nur dazu bestimmt, in andere Maschinen oder in andere unvollständige Maschinen oder Ausrüstungen eingebaut oder mit ihnen zusammengefügt zu werden.

The designated product is a partly completed machinery in the sense of Art 2 g) of Directive 2006/42/EC. It is only intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment.

Die relevanten, angewendeten und eingehaltenen grundlegenden Anforderungen nach Anhang I der Richtlinie 2006/42/EG sind im Anhang MR2 zu dieser Erklärung aufgeführt.

The relevant, applied and fulfilled essential requirements of Annex I of Directive 2006/42/EC are listed in Annex MR2 of this declaration.

Die speziellen technischen Unterlagen nach Anhang VII, B der Richtlinie 2006/42/EG wurden erstellt und werden den Behörden auf begründete Anforderung in ☒ elektronischer / ☐ Papierform zur Verfügung gestellt.

The relevant technical documentation according to Annex VII, B of Directive 2006/42/EC has been compiled and will be provided to the authorities upon request in ☒ electronic / ☐ paper form.

Die unvollständige Maschine darf erst dann in Betrieb genommen werden, wenn gegebenenfalls festgestellt wurde, dass die Maschine, in die die unvollständige Maschine eingebaut werden soll, den Bestimmungen der Maschinenrichtlinie 2006/42/EG entspricht.

The partly completed machinery must not be put into service until the final machinery into which it is to be incorporated has been declared in conformity with the provisions of Directive 2006/42/EC, where appropriate.

Annex MR2 to the declaration of incorporation

No. A5E51443210AC

Product identification: Geared motor T1A

The following essential health and safety requirements of Directive 2006/42/EG, Annex I are relevant for the identified uncompleted machinery. According to the remarks in column 3 they have been solved respectively bear residual hazards which have to be covered by the manufacturer of the final machinery. Risks, not being relevant for the uncompleted machinery are not listed.

2006/42/EC Annex I	Denotation	Requirement fulfilled	
		y/n	Additional remark
1	Essential health and safety requirements		
1.1.2	Principles of safety integration	y	
1.1.3	Materials and products	y	
1.1.5	Design of machinery to facilitate its handling	y	
1.3	Protection against mechanical hazards		
1.3.1	Risk of loss of stability	y	
1.3.2	Risk of break-up during operation	y	
1.3.3	Risks due to falling or ejected objects	y	
1.3.4	Risks due to surfaces, edges or angles	y	
1.3.7	Risks related to moving parts	y	
1.3.8.1	Moving transmission parts	y	
1.5	Risks due to other hazards		
1.5.1	Electricity supply	y	Fulfillment of safety objectives of Directive 2014/35/EC
1.5.2	Static electricity	y	
1.5.4	Errors of fitting	y	
1.5.5	Extreme temperatures	y	
1.5.6	Fire	y	
1.5.7	Explosion	y	
1.5.8	Noise	y	
1.5.9	Vibrations	y	
1.5.13	Emissions of hazardous materials and substances	y	

Diese Erklärung bescheinigt die Übereinstimmung mit den genannten Richtlinien, ist jedoch keine Beschaffenheits- oder Haltbarkeitsgarantie.
